For your reading ease, changes from last year's edition are highlighted.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice or TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.

Introduction

“Summer Food Service Program: 2004 Nutrition Guidance for Sponsors” has been developed to help sponsors identify their food service responsibilities. This publication offers sample menus of breakfasts, lunches and snacks, along with menu planning and nutrition guidance. Also included are food service record-keeping requirements, food buying and storage information, and guidance in the areas of food safety and sanitation. This guide is primarily for use by sponsors who prepare meals on-site or in central kitchens.

The goal of the Summer Food Service Program (SFSP) is to serve nutritious breakfasts, lunches, and snacks that meet meal pattern requirements and are appetizing to children and/or eligible disabled adults. The meal pattern requirements assure well-balanced meals that supply the kinds and amounts of foods that children require to help meet their nutrient and energy needs. The meal patterns establish the minimum portions of the various meal components that must be served to each participant in order for the participating sponsor to receive reimbursement for each meal.

Dietary Guidelines For Americans, 2000

Guidance is included to help SFSP sponsors achieve the goals of the [Healthy People 2000 National Health Promotion and Disease Prevention Objectives]. *The Dietary Guidelines for Americans 2000* make ten recommendations for promoting health and may reduce the risk of developing certain chronic diseases. These guidelines are:

Aim for Fitness

- Aim for a healthy weight.
- Be physically active each day.

Build a Healthy Base

- Let the Pyramid guide your food choices.
- Choose a variety of grains daily, especially whole grains.
- Choose a variety of fruits and vegetables daily.
- Keep food safe to eat.

Choose Sensibly

- Choose a diet that is low in saturated fat and cholesterol and moderate in total fat.
- Choose beverages and foods to moderate your intake of sugars.
- Choose and prepare foods with less salt.
- If you drink alcoholic beverages, do so in moderation.

These guidelines apply to adults and children ages 2 years and older. You can download a copy of these guidelines at www.usda.gov/cnpp/Pubs/DG2000/Index.htm.

Eating Habits Begin Early

If given the opportunity, children can learn good, healthy eating habits when they are young. Offering healthy meals and snacks, through the SFSP, provides the energy children need for active lives, and keeps them healthy and fit. The summer food service setting can make mealtimes pleasant. Nutrition education during meals, snacks, or at play can serve to begin a lifestyle of healthy eating.

PART I — MENU PLANNING

Meeting the Dietary Guidelines Challenge

In this section, you will learn:

- ways to add variety to your menus;
- about the importance of physical activity; and
- tips on lowering fat, salt and sugar in your menus.

Children's eating habits begin young. We know that tastes are learned habits and are acquired at an early age. Let's give children a healthy start.

Aim For Fitness

Guideline: Aim for a healthy weight.

The SFSP can assist participants in maintaining a healthy weight. The key to good health is a lifestyle that includes sensible eating with regular physical activity. Weight gain results when more food is consumed than the body needs. Eating habits and exercise habits begin in childhood. Participants are influenced by the foods you serve at meals and snacks.

Tips for Aiming for a Healthy Weight

- Serve a variety of vegetables, fruits, and grains (especially whole grains) with little added fat or sugar.
- Serve a variety of pasta, rice, breads, and cereals with little added saturated fat and a moderate or low amount of added sugars.
- If activities are part of your SFSP Program, keep participants active. They should get regular physical activity to balance calories from the foods they eat.
- Offer participants sensible portion sizes.

Overweight children need special help from health professionals. Since children still need to grow, weight loss is not recommended unless guided by a healthcare provider.

Guideline: Be physically active each day.

Encourage participants to take part in vigorous activities (and join them whenever possible). Children need at least 60 minutes per day of moderate physical activity. It's important to encourage children to get in the habit of being physically active at a young age. Physical activity helps children have fun and:

- maintain a healthy weight;
- develop strong muscles, a healthy heart and lungs;
- strengthen bones;
- develop motor skills, balance, and coordination;
- develop positive attitudes; and
- improve self-esteem.

Promote Physical Activity

Regular physical activity is important to maintaining health. It burns calories, helps with weight control, and assists in the prevention of certain diseases later in life. While physical activity is not an SFSP requirement, it is important, however, that participants be provided a healthy environment. Children can be physically active by:

- Turning up the music and dancing;
- Lifting and throwing balls to use muscles;
- Taking the stairs, both up and down; or
- Playing children's games such as T-ball and hopscotch.

Some suggestions for adults to increase their level of physical activity:

- Walk or ride bikes more, and drive less;
- Walk up and down stairs instead of taking an elevator;
- Clean the house; or
- Play actively with children.

Question: How much activity should children get?

Answer: The Dietary Guidelines for Americans recommends at least 60 minutes each day.

Build A Healthy Base

Guideline: Let the Pyramid guide your food choices.

When planning menus, remember different foods contain different nutrients and other healthful substances. No single food can supply all the nutrients in the amounts participants need. To make sure participants get all the nutrients and substances they need for health, build a healthy base by using the Food Guide Pyramid as a starting point. The USDA Food Guide Pyramid is an outline for what to eat each day based on the Dietary Guidelines.

It is a healthy eating pattern that has a recommended number of daily servings from each of the five groups. The SFSP meal pattern is consistent with the Pyramid because it includes servings of grains/breads, fruits/vegetables in addition to meat/meat alternates, and milk. The Pyramid shown in the Reference Section recommends the number of daily servings from each of the major food groups for older children and adults. In the reference section, you will find both the Food Guide Pyramid and the Food Guide Pyramid for Young Children (2 to 6 years old). You can also download a copy of both Food Guide Pyramids at www.usda.gov/cnpp/pyramid2.htm.

Tips for Using the Food Guide Pyramid

- Choose a variety of foods from each major food group so that participants receive the nutrients needed for health.
- Serve grains, especially whole grains, and vegetables and fruits.
- Also serve low fat dairy products and low-fat foods from the meat and bean group.
- Allow participants to enjoy fats and sweets occasionally.

Guideline: Choose a variety of grains daily, especially whole grains.

Foods from grains like wheat, rice, and oats help to form the foundation of a healthy diet. Grains provide vitamins, minerals, and carbohydrates and other substances that are important for good health. Foods made from grains are low in fat unless fat is added during processing in preparation or at the table. Vitamins, minerals, fiber, and other protective substances in whole grain foods contribute to the health benefits of whole grains. Refined grains are low in fiber and in the protective substances that accompany fiber. Eating plenty of fiber-containing foods, such as whole grains (and also many fruits and vegetables) promotes proper bowel function. The high fiber content of many whole grains may also help you to feel full with fewer calories.

Tips for Serving a Variety of Grains

- Read the Nutrition Facts Label on foods so you can choose grain products high in fiber and low in saturated fat and sodium. For example, look for one of the following ingredients first on the label ingredient list: whole wheat, whole oats, whole rye, brown rice, oatmeal, whole grain corn, graham flour, bulgur, cracked wheat, oatmeal, and pearl barley.
- In main and side dishes, include a variety of enriched rice, macaroni, noodles, and other pasta products. **Introduce brown rice and whole-wheat pasta to the menu to increase fiber content.**
- Increase the proportion of grains to other ingredients. For example, serve a thicker pizza crust.
- Add grains such as pre-cooked rice and oats to ground beef in meat loaf and similar casseroles. Use bulgur or barley to thicken soups.
- Introduce children to whole-wheat bread by serving sandwiches with one slice of whole-wheat bread and one slice of white.
- Substitute whole-wheat flour for part of the white flour in recipes. **Try this with pizza crust, which is usually made with white flour.**

- When introducing whole grains, try starting with 10-percent whole-grain flour or grains. Gradually increase the amount each time the recipe is prepared.

Guideline: Choose a variety of fruits and vegetables daily.

Like grains, fruits and vegetables form the base of the Pyramid and the basis for a healthy diet. This food group provides essential vitamins and minerals, fiber, and other substances needed for good health. Variety is important because different fruits and vegetables are rich in different nutrients.

Tips for Including More Fruits and Vegetables in Your Menus

- Serve vegetables higher in fiber such as cooked dry beans, broccoli, tomatoes, leafy greens, potatoes with skin, and carrots.
- Serve raw vegetable salads and raw vegetables for snacks.
- Season vegetables with herbs for taste appeal.
- Serve fresh fruits for naturally sweet desserts.
- Buy fruits and vegetables in season for better prices and taste.
- Serve fresh fruits higher in fiber, such as those with edible skins—like apples, pears, nectarines, peaches—and those with edible seeds, such as berries and bananas.

Guideline: Keep food safe to eat.

Safe food is food that has little risk of causing food borne illness (food poisoning). Food borne illness can be caused by harmful bacteria, toxins, parasites, viruses, or contamination by chemicals. Some foods require special care to be sure they are safe to eat: eggs, meats, poultry, fish, shellfish, milk products, and fresh fruits and vegetables. Young children are at high risk of food borne illness so be especially careful to prepare and serve foods using food safety precautions.

Follow the steps below to keep your food safe.

- Never serve unpasteurized juices, unpasteurized milk, fresh bean sprouts, or foods containing raw eggs.
- Cook meat, poultry, fish, and shellfish until completely done. The internal temperature should be 165°F, except for poultry (breast -170°F; whole bird -180°F).
- Heat leftovers to an internal temperature of 165°F. Use leftovers only once, then throw any leftovers away.
- Reheat sauces, soups, marinades, and gravies to a rolling boil.
- Wash your hands and the participants' hands often—for 20 seconds with warm, soapy water (count to 30).
- Store raw meat, poultry,

eggs, fish, and shellfish in containers away from other foods on the bottom shelf of the refrigerator. Do not prepare them on the same surface as you prepare other foods.

- Never leave raw or cooked meat, poultry, eggs, fish, or shellfish out at room temperature for more than 2 hours, 1 hour if air temperature is above 90°F.
- Keep cold foods cold (below 40°F) and hot foods hot (above 140°F). Test temperatures with an instant-read thermometer.
- If you're not sure that food has been prepared, served, or stored safely, throw it out.

For more information, contact USDA's Meat and Poultry Hotline, 1-800-535-4555, or FDA's Food Information Line, 1-888-SAFE FOOD. You can also visit www.fsis.usda.gov/OA/consedu.htm.

Choose Sensibly

Guideline: Choose a diet that is low in saturated fat and cholesterol and moderate in total fat. Offer foods that are low in saturated fat and cholesterol and moderate in total fat.

In general, health professionals believe that food habits established in childhood are important in preventing heart disease later in life. They recommend reducing the risk of heart disease by decreasing the amount of total fat, saturated fat, and cholesterol in the diet.

However, remember the advice of the Dietary Guidelines about limiting fat, saturated fat, and cholesterol does not apply to infants and toddlers below the age of 2 years. The American Academy of Pediatrics states, "No restriction should be placed on the fat and cholesterol content of diets of infants less than 2 years..." These early years of rapid growth and development require high energy intakes.

Fat is an essential part of everyone's diet but it is important to choose sensibly. The Dietary Guidelines recommend that children who are 2 years of age or older aim for a total fat intake of no more than 30 percent of calories. Beginning at age 2, children should get most of their calories from grain products; fruits; vegetables; low-fat dairy products; and beans, lean meat and poultry, fish, or nuts. Be careful, nuts may cause choking in 2 or 3 year olds.

Did you know?

- ☛ Some fat is necessary in the diet. It provides energy, and helps your body absorb vitamins A, D, and E. Fats, such as margarine, butter, oils, and salad dressings, add flavor to foods. They also help to provide good texture and aroma.
- ☛ Fat contains over two times the calories of an equal amount of protein or carbohydrate. There are 9 calories in a gram of fat. Compare that to 4 calories in a gram of protein. Likewise, there are 4 calories in a gram of carbohydrate.

Remember: There are no good foods or bad foods! All foods, including pizza and hot dogs, can be included in nutritious menus that meet the goals of the Dietary Guidelines.

So don't eliminate. Just offer smaller amounts!

Balance higher fat foods in menus with items lower in fat. For example, offer baked fries instead of deep fat fries with chicken nuggets.

Here are some ideas to lower fat when planning menus and preparing foods.

Meat and Meat Alternates

- Offer lean meats, poultry, or fish.
- Bake, broil, or roast instead of frying.
- Trim fat before and/or after cooking. When possible, remove skin from chicken.
- Drain fat from meats before serving.
- Use low-fat ground turkey or choose lean ground beef instead of regular ground beef.
- Serve bean-based entrees such as tacos, burritos, chili or cooked dried beans for variety.

- Chill broth from poultry or meats until fat becomes solid. Remove fat before using the broth in soups.
- Substitute fruit glazes instead of high fat sauces or gravies.
- Limit your service of high-fat meats such as sausage, salami, bologna and other cold cuts.
- Try lower fat varieties of cheese, such as part-skim mozzarella, low fat cottage cheese, or part-skim ricotta cheese in recipes.
- Purchase water-packed tuna instead of tuna packed in oil.
- Substitute low-fat or nonfat yogurt instead of sour cream or combine with low-fat mayonnaise in tuna salads.

Vegetables and Fruits

- Steam, bake, or boil vegetables until just tender and still crisp.
- Serve fresh vegetables and fruits raw with a yogurt or other low-fat dip.
- Stir-fry a variety of vegetables in a small amount of oil.
- Add little or no margarine or butter to your food.
- Use spices or herbs instead of butter or margarine for flavor.
- Example: Season carrots with cinnamon.
- Offer light sauces or flavorings like an orange glaze or lemon juice.
- Serve fruit for dessert in place of cookies, cakes, or ice cream.

Grains and Breads

- Serve high-fat items such as croissants, doughnuts, and pies less often.
- Use whole-grain bread and offer other breads such as pita bread, bagels, corn tortillas, and muffins made with applesauce replacing some of the fat.
- Serve jellies, jams, or honey instead of margarine on breads or rolls.
- Use often - lower-fat grain products such as pastas, noodles, brown rice, barley, and bulgur.

Milk

- Offer low fat or fat-free milk to children 2 years of age or older, and to eligible, disabled adults.
- Replace whole milk in baking with low fat, fat-free, buttermilk, or reconstituted nonfat dry milk.

Guideline: Choose beverages and foods that moderate your intake of sugars.

Offer and use sugars in moderation. Sugars and many foods that contain them in large amounts supply calories, but they may be limited in vitamins and minerals. Eating sugars can promote tooth decay, especially when eaten between meals.

Intake of a lot of foods high in added sugars, like soft drinks, is of concern. Consuming excess calories from these foods may contribute to weight gain or lower intake of more nutritious foods. Use the list below to identify the most commonly eaten foods that are high in added sugars (unless they are labeled “sugar free” or “diet”). Limit your use of these beverages and foods. Offer water to participants as a drink.

- Soft drinks
- Cakes, cookies, pies
- Fruitades and drinks such as fruit punch and lemonade
- Dairy desserts such as ice cream
- Candy

Sweet foods such as toaster pastries, coffee cake, doughnuts, sweet rolls, cookies, cakes, or formulated grain-fruit products when made from whole-grain or enriched meal or flour can be used to meet the grain/bread requirement as specified in the Grains and Breads Chart of the Grains/Bread Instruction (FNS 783-1). This instruction can be found in the reference section of this handbook.

Foods contain sugars in various forms. Read ingredient labels for clues on sugar content. A food is likely to be high in sugars if one of these names appears first or second in the ingredient list or if several of these names are listed:

- *Sucrose*
- *Glucose*
- *Maltose*

- *Dextrose*
- *Lactose*
- *Fructose*
- *Honey*
- *Fruit juice concentrate*
- *Brown sugar*
- *Corn sweetener*
- *Corn syrup*
- *High fructose corn syrup*
- *Invert sugar*
- *Malt syrup*
- *Molasses*
- *Raw sugar*
- *Syrup*
- *Table sugar*

Tips For Using Less Sugar

- Use seasonal fresh fruits when possible. Avoid adding sugar or honey to fresh fruits.
- Use fruits packed in light syrup or juice. Since these are already sweet, there is no need to add sugar.
- Use fresh or frozen fruits in snacks.
- Limit the use of sweet snacks and sweet breakfast foods.
- Modify recipes for sweet snacks and sweet breakfast items to reduce sugar without sacrificing quality.

Guideline: Choose and prepare foods with less salt.

Table salt contains sodium and chloride. Both are essential in the diet. However, most Americans consume more salt and sodium than they need.

Foods containing salt provide most of the sodium in the diet. Much of it is added during processing or during preparation. Foods with added salt include cured and processed meats; cheeses; ready-to-eat snacks; prepared frozen entrees and dinners; packaged mixes; canned soups; salad dressings and pickles.

If you are planning to serve any of these foods:

- Check the sodium content.
- Select foods that have less sodium.

Many people can reduce their chances of developing high blood pressure by consuming less salt. Currently there is no way to predict who will develop high blood pressure from eating too much salt. However, consuming less salt or sodium is not harmful and can be recommended for the healthy, normal person. It is a good idea to do both of the following:

- Serve foods lower in sodium.
- Reduce salt during food preparation.

Tips for Moderating Salt Intake

- When purchasing foods high in salt, read the label and select those that have less sodium.
- During food preparation, season foods lightly with salt or add none at all.
- Use herbs or onions (fresh or dried) instead of bouillon cubes or powdered meat base to season recipes.
- Limit the number of times you serve salty snacks, such as crackers or pretzels.
- Read food labels carefully and choose foods lower in sodium.
- Serve smaller amounts of salty condiments, such as mustard, catsup, relish, and salad dressing —or serve them less often.
- Do not add salt when cooking pasta and rice.

Guideline: If you drink alcoholic beverages, do so in moderation.

Children and adolescents should not drink alcoholic beverages at all. No participant on any summer food service site should be offered alcoholic beverages or potentially dangerous drugs under any circumstances.

Young children can get very sick if they drink alcohol. The accidental use of alcohol could be life threatening. The use of alcohol involves risks to health and other serious problems.

Meal Pattern Requirements

In this section, you will find information on:

- meal pattern requirements for the meals you serve;
- ways to add variety to your menus;
- foods and their nutrient contributions;
- how to make substitutions for participants with special needs;
- serving vegetarian meals; and
- what to do about food allergies.

The goal of SFSP is to serve meals that meet the participant's nutritional needs. The SFSP provides foods for good health that are appetizing to participants, and are consistent with the *Dietary Guidelines for Americans*. Meal pattern requirements assist the menu planner in providing well-balanced, nutritious meals that supply the kinds and amounts of foods that help participants meet their nutrient and energy needs. The chart on the following page shows the required food components for breakfast, lunch, and snacks, with the minimum required serving sizes. Because teenagers have greater food needs, sponsors may serve adult-size portions to older children.

In certain cases, SFSP sponsors may be approved by the State agency to serve meals that meet the meal pattern requirements of other Child Nutrition Programs, such as the Child and Adult Care Food Program (CACFP). This may be helpful in situations where the sponsor would like to serve smaller meals to younger children. SFSP sponsors that serve meals prepared in schools participating in the National School Lunch Program (NSLP) or School Breakfast Program (SBP) may be approved by the State Agency to substitute the meal requirements outlined in the NSLP and SBP regulations for the SFSP meal pattern requirements. Refer to the SFSP Administrative Guidance for more details.

Summer Food Service Program Meal Patterns

Food Components	Breakfast	Lunch or Supper	Snack¹ (Choose two of the four)
Milk			
Milk, fluid	1 cup (8 fl oz) ²	1 cup (8 fl oz) ³	1 cup (8 fl oz) ²
Vegetables and/or Fruits			
Vegetable(s) and/or fruit(s) or Full-strength vegetable or fruit juice or an equivalent quantity of any combination of vegetables(s), fruit(s), and juice	$\frac{1}{2}$ cup $\frac{1}{2}$ cup (4 fl oz)	$\frac{3}{4}$ cup total ⁴	$\frac{3}{4}$ cup $\frac{3}{4}$ cup (6 fl oz)
Grains and Breads⁵			
Bread or Cornbread, biscuits, rolls, muffins, etc. or Cold dry cereal or Cooked pasta or noodle product or Cooked cereal or cereal grains or an equivalent quantity of any combination of grains/breads	1 slice 1 serving $\frac{3}{4}$ cup or 1 oz ⁶ $\frac{1}{2}$ cup $\frac{1}{2}$ cup	1 slice 1 serving $\frac{3}{4}$ cup or 1 oz ⁶ $\frac{1}{2}$ cup $\frac{1}{2}$ cup	1 slice 1 serving $\frac{3}{4}$ cup or 1 oz. ⁶ $\frac{1}{2}$ cup $\frac{1}{2}$ cup
Meat and Meat Alternates	(Optional)		
Lean meat or poultry or fish or Cheese or Eggs or Alternate Protein Product ⁷ Cooked dry beans or peas or Peanut butter or soy nut butter or other nut or seed butters or Peanuts or soy nuts or tree nuts or seeds or Yogurt, plain or sweetened and flavored or An equivalent quantity of any combination of the above meat/meat alternates	1 oz 1 oz 1/2 large egg 1 oz $\frac{1}{4}$ cup 2 tbsp 1 oz 4 oz or $\frac{1}{2}$ cup	2 oz 2 oz 1 large egg 2 oz $\frac{1}{2}$ cup 4 tbsp ⁸ 1 oz= 50% ⁹ 8 oz or 1 cup	1 oz 1 oz 1/2 large egg 1 oz $\frac{1}{4}$ cup 2 tbsp 1 oz 4 oz or $\frac{1}{2}$ cup

For the purpose of this table, a cup means a standard measuring cup.

Indicated endnotes can be found on the next page.

Endnotes

1. Serve two food items. Each food item must be from a different food component. Juice may not be served when milk is served as the only other component.
2. Shall be served as a beverage, or on cereal, or use part of it for each purpose.
3. Shall be served as a beverage.
4. Serve two or more kinds of vegetable(s) and/or fruit(s) or a combination of both. Full-strength vegetable or fruit juice may be counted to meet not more than one-half of this requirement.
5. All grain/bread items must be enriched or whole-grain, made from enriched or whole-grain meal or flour, or if it is a cereal, the product must be whole-grain, enriched or fortified. Bran and germ are credited the same as enriched or whole-grain meal or flour.
6. Either volume (cup) or weight (ounce) whichever is less.
7. Must meet the requirements in Appendix A of the SFSP regulations.
8. At lunch, must serve an additional meat/meat alternate with nut butters.
9. No more than 50 percent of the requirement shall be met with nuts or seeds. Nuts or seeds shall be combined with another meat/meat alternate to fulfill the requirement. When determining combinations, 1 ounce of nuts or seeds is equal to 1 ounce of cooked lean meat, poultry, or fish.

Components and Nutrient Contributions

Meat and Meat Alternates

Meal Components	Examples	Nutrients
Meat, fish, poultry, and eggs	Beef, chicken, fish, ham, pork, turkey, luncheon meats (per FNS 279), sausages, and eggs	Protein, iron, phosphorus, potassium, B vitamins, and zinc; contain fat, saturated fat, and cholesterol
Cheese	Swiss, ricotta, part-skim mozzarella, cottage cheese, American cheese, cheddar, and other cheeses	Protein, calcium, phosphorus vitamins A and B-12; contain fat, saturated fat, and cholesterol
Dry beans and peas (Can also count as a vegetable, but not in the same meal.)	Lentils, Navy beans, black beans, lima beans, kidney beans, pinto beans, black-eyed peas, refried beans, chickpeas, and soy beans	Protein, iron, complex carbohydrates, potassium, dietary fiber, magnesium, phosphorus, and folate;
*Peanut butter and other nut butters *Nuts and seeds	Peanut butter, almond and other nut butters Walnuts, peanuts, almonds, soy nuts, other nuts, and seeds	Protein, dietary fiber, vitamin E, copper, magnesium, phosphorus, and niacin; contain fat
Yogurt	Commercially produced yogurt, plain or flavored, unsweetened or sweetened	Protein, carbohydrate, calcium, phosphorus, potassium, and vitamin A.
Alternate Protein Product (APP)	APP is mixed/made into such food items as ground beef patties, meat loaf, tuna salad, chicken nuggets, pizza toppings, etc.	Protein, and other nutrients vary depending on the type of APP used

*** Caution:** Children under 5 are at the highest risk of choking. Young children should not be fed spoonfuls or chunks of peanut butter or other nut butters. Instead, USDA recommends that peanut butter and nut butters be spread thinly on bread or crackers. Also, nuts and/or seeds should be served to children in a prepared food and be ground or finely chopped. (See additional information on choking risks on page 114 of this publication.)

Menu Ideas to Increase Variety

- Try pita bread sandwiches or "pita pockets" stuffed with tuna, lettuce, and tomato; or chicken salad with celery and carrots.
- Make a vegetarian pita pocket with favorite veggies, chickpeas, and plain yogurt.
- Serve peanut butter with apple chunks on whole wheat bread.
- Serve lean meats, skinless poultry, and lower fat cheeses.
- Try an ethnic favorite: taco, gyro, pirogi, or calzone.
- Mix ground meat with ground turkey for hamburgers or taco filling.
- Make a submarine sandwich with roast turkey or ham and cheese.
- Try lentils or Navy beans in a soup.

Vegetables

Meal Components	Examples	Nutrients
Vegetables (dark green, deep yellow)	Broccoli, carrots, collard greens, green pepper, kale, pumpkin, spinach, sweet potato, winter squash	Vitamins A and C, fiber, iron, vitamin B-6, folate, potassium, dietary fiber, magnesium, and riboflavin
Vegetables (starchy)	Potatoes, black-eyed peas, corn, lima beans, green peas	Complex carbohydrate, fiber, iron, folate, vitamin C, potassium, and magnesium
Vegetables (other)	Cabbage, cauliflower, celery, cucumbers, green beans, lettuce, okra, onions, summer squash, tomatoes, vegetable juice, zucchini	Dietary fiber, vitamin C, folate, potassium, and magnesium
Dry beans and peas (can also count as a meat alternate, but not in the same meal.)	Black beans, chickpeas, kidney beans, lentils, Navy beans, peas, pinto beans, soy beans	Protein, complex carbohydrate (starch and dietary fiber), iron, magnesium, phosphorus, potassium and folate

Menu Ideas To Increase Variety

- Try baked potatoes topped with broccoli and cheese.
- Dip raw carrots and cauliflower in low-fat yogurt dip or low-fat salad dressing.
- Encourage participants to try vegetables such as eggplant, yellow squash, turnips, and spaghetti squash.
- Use spinach and other greens for salads.
- Serve seasonal fresh vegetables.

Caution must be used when giving raw vegetables to young children because of the risk of choking. (See additional information on choking risks on page 114 of this publication.) Vegetables, however, provide a good flavor and texture variety to the menu.

Fruits

Meal Components	Examples	Nutrients
Citrus fruits, melon, berries	Oranges, grapefruit, citrus juices, cantaloupe, watermelon, strawberries	Carbohydrate, dietary fiber, potassium, folate, and vitamin C; deep yellow fruit source of vitamin A
Other fruit	Apple, apricot, banana, cherries, fruit juice, grapes, peach, pear, pineapple, plum, prunes, raisins	Carbohydrate, dietary fiber, potassium, vitamin C; deep yellow fruit source of vitamin A

Menu Ideas To Increase Variety

- Serve fresh fruits in season for the area of the country where you live, such as cantaloupe, peaches, watermelon, strawberries, plums, raspberries, blueberries, pears, grape halves and pineapple.
- Offer canned fruits packed in light syrup or in natural juices, such as fruit cocktail, peaches, and pears.
- Buy frozen mixed fruit and add fresh banana slices.
- Choose a fruit to top a dessert like pudding or gelatin.
- Try using an orange glaze on chicken breasts.
- Introduce unfamiliar fruits such as kiwi, papaya, mango, apricots, dates, and figs.

Grains and Breads

Meal Components	Examples	Nutrients
Enriched breads, cereals, pasta	Bagels, cornbread, grits, crackers, pasta, corn muffins, noodles, pita bread, ready-to-eat cereal, white bread, rolls	Source of complex carbohydrate (starch), thiamin, riboflavin, niacin, iron; some contain added fat
Whole-grain breads, cereal, pasta	Brown rice, corn tortillas, oatmeal, whole-grain rye bread, whole-grain ready-to-eat cereal, whole-wheat pasta, crackers, bread, rolls	Source of complex carbohydrate (starch and dietary fiber), copper, iron, magnesium, phosphorus, thiamin, riboflavin, niacin; some contain added fat

Menu Ideas To Increase Variety

- Use a variety of breads such as pita pockets, pizza crust, foccaccia bread, bagels, corn bread, tortillas, and English muffins.
- Use round crackers, rye crackers, soda crackers, and whole-wheat squares.
- Pastas also now come in different colors and flavors—tomato, spinach, and whole wheat. Try different pasta types such as macaroni, twists, spaghetti, or rigatoni in a cold pasta salad.
- Add smaller pastas such as bowties, alphabet letters, and small shells in soups.
- Try rice, oats, barley, bulgur and couscous for a change!

Milk

Meal Components	Examples	Nutrients
Milk, fluid	Pasteurized, unflavored or flavored low fat milk, skim milk, buttermilk, lactose-reduced milk, acidophilus milk, whole milk	Calcium, protein, riboflavin, phosphorus, carbohydrate, potassium, vitamins B-12 and A, and if fortified, Vitamin D; most contain fat, saturated fat, cholesterol

Menu Ideas To Increase Variety

- Offer only whole milk to children up to the age of 2. Try offering skim or low fat milk to children ages 2 and above, and to eligible, disabled adults.
- Try different low fat or reduced fat varieties, such as 1 percent or 2 percent fat white, chocolate, or strawberry flavored milk.
- Offer tastes of skim milk, with little or no fat (0 to .5 percent).
- Try buttermilk sometimes!
- For participants who require it, serve alternative types of milk (a reduced-lactose milk or acidophilus) if available.
- Try shelf-stable milk, too!

Facts About Meal Pattern Requirements

Meat and Meat Alternates

- Must be served at lunch and supper.
- May be served as part of the snack.
- May be served as additional items at breakfast.
- Include a serving of cooked lean meat (beef, pork, lamb, veal), poultry, fish, cheese, cooked dry beans or peas, eggs, alternate protein product, peanut butter or other nut or seed butters (almond, sesame, sunflower), or nuts or seeds, yogurt, or any combination.
- Serve the meat/meat alternate as the entree (main dish) or as part of the main entree and in one other menu item.
- At lunch, must serve an additional meat/meat alternate with peanut butter.

Nuts and seeds may fulfill:

- (1) all of the meat/meat alternate requirement for the snack; and
- (2) up to one-half of the required portion for lunch or supper.

Nuts and seeds must be combined with another meat/meat alternate to fulfill the lunch or supper requirement. For determining combinations, 1 ounce of nuts or seeds is equal to 1 ounce of cooked lean meat, poultry, or fish. The nuts and seeds that may be used as a meat alternate include peanuts, soy nuts, tree nuts (almonds, walnuts, and pecans), and seeds (sunflower, sesame, and pumpkin).

*** Caution:** Children under 5 are at the highest risk of choking. USDA recommends that nuts and/or seeds be served to them ground or finely chopped in a prepared food. Refer to the "You Can Help Prevent Choking" and the "Infant & Child Lifesaving Steps" pages in the Reference Section.

Yogurt is very popular with children. It soothes their palate, has a smooth texture, and can be flavored for children's tastes. Plain yogurt may be used as a topping on potatoes (instead of butter or sour cream). Flavored yogurt goes well with fruit and fresh vegetables at meals. Plain, flavored, or sweetened yogurt, made with whole or low fat milk, provides additional sources of calcium. Commercially prepared yogurt may be served as a meat/meat alternate.

For breakfast and snack you may serve 4 oz (weight) or ½ cup (volume) of plain, sweetened or flavored yogurt to equal 1 ounce of the meat/meat alternate component. For lunch and supper you may serve 8 oz. (weight) or 1 cup (volume) yogurt to equal 2 ounces of the meat/meat alternate component. For younger children, 2 ounces

(weight) or ¼ cup (volume) fulfills the equivalent of ½ ounce of the meat/meat alternate requirement. Homemade yogurt, frozen yogurt or other yogurt flavored products (i.e., yogurt bars, yogurt-covered fruit and/or nuts) or similar products may not be credited. (Fruit-flavored yogurt is credited equally as plain or sweetened yogurt.)

Question: Is the fruit flavoring within yogurt creditable towards the fruit component?

Answer: No, the fruit within yogurt whether blended, mixed, or presented on top cannot be credited towards the fruit requirement. It is considered part of the creditable yogurt. Extra fruit provided, i.e., fresh strawberries, canned peaches, or banana slices can count towards the fruit component.

Vegetables and/or Fruits, as a food group, provide most of the vitamin C and a large share of the vitamin A in meals as well as dietary fiber and carbohydrates for long-lasting energy.

- At breakfast, a serving of fruit or vegetable or full-strength (100-percent) fruit or vegetable juice is required. Breakfast is a good time to serve foods containing vitamin C, such as citrus fruits and juices, like oranges or grapefruit. Other foods containing vitamin C are tomato juice, strawberries, and cantaloupe.
- Consider using dried fruits, such as dried apricots, raisins, and prunes, to provide variety in menus. (Look for the "Sources of Nutrients" chart in the Reference Section that suggests foods containing vitamin A, vitamin C, and iron).
- For lunch and supper, serve two or more kinds of vegetables and/or fruits at each meal. Up to one-half of the total requirement may be met with full-strength (100-percent) fruit or vegetable juice. For variety, serve full-strength (100-percent) fruit or vegetable juices, fruits, or vegetables for midmorning and mid-afternoon snacks.
- Cooked vegetables means a serving of drained.
- Cooked or canned fruit means a serving of fruit and the juice it's packed in.
- Thawed frozen fruit includes fruit with the thawed juice.

- Select canned fruits that are packed in fruit juice, water, light syrup, or natural juices.
- Juice may not be served if milk is the only other component for the snack.
- Juice drinks with at least 50-percent-strength juice are permitted but discouraged because double the volume is needed to meet Program requirements. Beverages containing less than 50-percent-strength juice, such as fruit punches, ades, or drinks made with fruit-flavored powders and syrups, do not meet program requirements.

Try not to serve juice to meet the fruit/vegetable requirement too many times throughout the week. It may fill up the children and take the place of foods that provide other needed nutrients.

Examples of full-strength juices:

Apple	Pineapple
Grape	Prune
Grapefruit	Tangerine
Grapefruit-Orange	Tomato
Orange	Vegetable

Any blend or combination of these full-strength juices will meet Program requirements.

Grains/Breads must be whole-grain or enriched or made from whole-grain or enriched flour or meal or if it is a cereal, the product must be whole-grain, enriched or fortified. Bran and germ are credited the same as whole-grain or enriched meal or flour. Grains/breads provide carbohydrates, some B vitamins (thiamin, riboflavin, and niacin), minerals (such as iron), protein, and calories. Whole-grain products supply additional vitamins, minerals, dietary fiber, and a variety of tastes and textures.

- At breakfast, choose from a serving of enriched or whole-grain breads, biscuits, rolls, or muffins or a serving of enriched, whole-grain or fortified cereal, or a combination of both.
- For midmorning and mid-afternoon snacks, choose from a serving of: enriched or whole-grain bread; enriched, whole-grain, or fortified cereal; cooked enriched or whole-grain rice, bulgur, or macaroni; cornbread, biscuits, rolls, muffins, crackers, or cookies made of enriched or whole-grain meal or flour. Hot breads, such

as rolls, biscuits, cornbread, or muffins, or raisin bread add variety and appeal as well as nutrients.

- At lunch or supper, choose from a serving of: enriched or whole-grain bread, or cooked whole-grain or enriched rice, bulgur, or cornbread; or enriched or whole-grain noodles, macaroni, or other pasta products. An equivalent serving of grains/breads made from whole-grain or enriched meal or flour may be substituted.

For more information, look at the Grains and Breads Chart in the Reference Section.

- | |
|---|
| <p>Reminders</p> <ul style="list-style-type: none">▶ Non-sweet snack products such as hard pretzels, hard bread sticks, and chips made from enriched or whole-grain meal or flour can be used to meet the bread requirement.▶ Grain-based sweet snack foods should not be served as part of a snack more than twice a week.▶ Some bread items or their accompaniments may contain more sugar, fat, or salt than others. Keep this in mind when considering how often to serve them. Read the “Nutrition Facts” panel on food labels to compare products. |
|---|

Milk

- At breakfast or for snacks, milk can be served as a beverage, on cereal, or as a beverage and on cereal. At lunch or supper, milk must be served as a beverage in accordance with SFSP meal pattern requirements.
- Use additional milk (fluid, evaporated, or nonfat dry milk) to prepare soups, casseroles, puddings, bakery items, or other baked or cooked products to add calcium and improve the nutritional quality of the meal.

**Serve Other Foods-
Add Variety
to Meals**

In addition to the foods required in the meal patterns for participants, "other foods" may be served at meals to help improve acceptability and to satisfy participants' appetites. Other foods provide additional energy, and, if wisely chosen, increase the variety of nutrients offered.

For example, you may serve small amounts of honey, jam, jellies, and syrup to add flavor and variety to pancakes, toast, English muffins, etc. Items such as mayonnaise, salad dressings, margarine, and oils should be used sparingly.

Additional foods served as desserts at lunch and supper help to meet the calorie needs of growing children by supplying extra food energy and other important nutrients. Baked products made from whole-grain or enriched flour supply additional amounts of iron and some B vitamins. Desserts made with milk, such as puddings, provide calcium along with other nutrients.

Remember, too, that "other foods" are often a source of hidden fat and salt. Be aware and limit the frequency and the amounts you serve of foods such as chips, ice cream, and pastries.

**Meal Substitutions
for Participants with
Special Needs**

A participant with a disability that restricts his or her diet is entitled to receive special meals at no extra charge, when that need is supported by a statement signed by a licensed physician. However, sponsors are not expected to make accommodations that are so expensive or difficult that they would cause the institution undue hardship. In most cases, participants with disabilities can be accommodated with little extra expense or involvement. A statement from the participant's physician is required to ensure that the substitutions in foods meet nutrition standards that are medically appropriate for that participant, and to justify that the modified meal is reimbursable. The physician's statement must identify:

- the participant's disability and an explanation of why the disability restricts the participant's diet;
- the major life activity affected by the disability; and
- the food or foods to be omitted from the participant's diet, and the food or choice of foods that must be substituted.

Sponsors are not required to make food substitutions based solely on individual or personal opinions regarding a healthful diet. Food substitutions may be made, at a sponsor's discretion, for an individual participant who does not have a disability, but who is medically certified as having a special medical or dietary need. Such determinations are only made on a case-by-case basis and must be supported by a statement that indicates which foods to avoid and to substitute. This type of statement must be signed by a recognized medical authority (e.g., physician, physician assistant, nurse practitioner, or registered nurse) or other health professional specified by the State agency.

Vegetarian Meals

For parents concerned about religious food restrictions or preparing vegetarian meals, the meal pattern currently allows for flexibility and menu management if personal preference is given in advance.

**Food Allergies
and Intolerances**

A food allergy is an abnormal response of the body's defense—the immune system—to an otherwise harmless food. Although any food may cause an allergic reaction, six foods are responsible for most of these reactions in children. These foods are peanuts, eggs, milk, tree nuts, soy, and wheat. When in a physician's assessment food allergies may result in severe, life-threatening reactions (anaphylactic reactions), the participant would meet the definition of "having a disability", and the food service personnel must make the substitutions prescribed by a licensed physician.

A food intolerance is an adverse food-induced reaction that does not involve the body's immune system. Lactose intolerance is one example of food intolerance. A person with lactose intolerance lacks an enzyme that is needed to digest milk sugar. When that person eats dairy and milk products, gas, bloating, and abdominal pain may occur. Sponsors are not required to make food substitutions for a person with food intolerances, as food intolerances are not considered disabilities. However, food substitutions may be made, at a sponsor's discretion, for an individual participant who is medically certified as having a special medical or dietary need such as a food intolerance. Such determinations are only made on a case-by-case basis and must be supported by a statement, signed by a recognized medical authority, which indicates which foods to avoid and to substitute.

Good Summer Menu Planning

In this section, you will find tips on:

- how to plan your menus;
- how to create a cycle menu;
- how to calculate serving sizes and costs;
- how to check your budget, inventory and labor;
- sample summer menus; and
- healthy snacks and easy salad ideas.

Good menu planning for summertime involves several food service considerations. Most importantly, the menu should meet a participant's nutritional needs. Participants' preferences, recipes, serving location, food costs, food safety and handling, equipment, and labor must be considered, too.

Planning menus means thinking about what foods to serve together. A healthful diet offers a variety of foods, is low in saturated fat and cholesterol, and moderate in total fat, salt and sugar. Moderation means offering foods with caution as to the number of times used.

Be practical. If food is to be served outside or delivered to a playground or camp site, make the menu practical and appealing. Consider the location, delivery of food, and ways to keep food safe to eat.

How to Plan A Summer Lunch Menu

Begin with the main dish or entree: consider a source of protein from the meat or meat alternate group. Sometimes, grains, vegetables, or fruits may be part of the main dish, such as a taco, burrito, or chef's salad. Choose a combination of a fruit and a vegetable that go together. Include a grain/bread that is rich in fiber. Add milk as the beverage.

Be sure the meal offers a variety of colors, textures, and tastes; includes participants' "likes and dislikes"; and meets SFSP's meal pattern requirements. Consider Dietary Guidelines recommendations for variety, lowering fat and increasing the use of whole-grains, fresh fruits, and vegetables. Complete the Summer Menu Checklist in this section to evaluate menus.

If you have on-site cooking facilities, use standardized recipes, when available. (A standardized recipe is a recipe that gives the same good results every time.) Think about preparation time, labor, equipment, delivery, and costs. Note extra needs and resources, such as ice, straws, garbage bags, and can liners.

Cycle Menus

Plan your menus in advance. One way to do this is to develop a cycle menu. A cycle menu is a set of planned menus that are repeated in the same order for a period of time, usually 2, 3 or 4 weeks. The menu is different every day during the cycle. A cycle menu offers variety and is flexible to allow for substitutions. It is the master plan of meal planning.

Adjust cycle menus as follows:

- Replace foods not available.
- Observe birthdays and other special occasions.
- Introduce new foods and try new recipes.
- Take advantage of seasonal foods or best buys.
- Use leftovers wisely.
- Reflect food acceptability.

When planning your menus include a schedule for food purchases, cost control, food preparation time and delivery.

Calculate Serving Sizes and Costs

Calculate serving sizes and food cost by following these steps:

- Select recipes.
- Determine the serving size.
- Determine how many meals to prepare.
- Adjust the recipes for number of servings.
- Calculate the amount of food for the total number of meals.
- Estimate the total food cost.

Check the Budget

Compare the estimated cost of the menu with the food budget. If this cost is too high for the food budget, replace some of the foods in the menu with less costly ones.

Check the Inventory

Based on the estimated amounts of foods needed to prepare the menus, determine the amount of food you have on hand in your storeroom and refrigerators. Decide which foods you need to purchase.

Check Labor and Equipment

Schedule production time, equipment usage, and develop work schedules. Do not over schedule or under schedule!

Worksheets

- Record menus on a worksheet.
- Prepare quantity food production records.
- Maintain food inventory control sheets.

See sample worksheets in the Reference Section of this guide.

Summer Menu Checklist

Evaluate menus on a weekly and monthly basis.

	Yes	No
1. Have you included all food components in the minimum portion sizes as specified by the USDA?	_____	_____
2. Have you varied foods from day to day and week to week?	_____	_____
3. Are foods containing vitamin A, vitamin C, and iron offered frequently?	_____	_____
4. Do meals include a variety of foods with a balance of color, texture, shape, flavor, and temperature?	_____	_____
5. Have you included fresh fruits and vegetables often, as well as whole grain or enriched bread or cereal products?	_____	_____
6. Have you included "other foods" to satisfy the appetites and to help meet the nutritional needs of the participants?	_____	_____
7. Have you considered the participants' likes and dislikes, cultural, and ethnic practices?	_____	_____
8. Have you chosen foods lower in fat?	_____	_____
9. Have you chosen foods moderate in sugars?	_____	_____
10. Have you chosen foods lower in salt?	_____	_____
11. Do meals provide adequate number of calories?	_____	_____

Sample Summer Menus

The following is a sample 6-day cycle menu. You may change any of the meals shown, rearrange the order, or make substitutions within a meal. Be sure each new menu offers the food components that the USDA meal pattern requires.

Note the variety of foods, lower fat selections, and culturally diverse menu suggestions. These sample menus are primarily for on-site preparation. Some suggestions can be used for off-site service at playgrounds or campsites.

Day 1

Breakfast

English Muffin – 25 gm or 0.9 oz
with 1 tbs Jelly
Fresh Fruit Cup - ½ cup
(Grapes, Melon, Strawberries)
Milk - 1 cup (8 fl oz)

Snack

Grape Juice - ¾ cup
“Ants on a Log” (*Celery Sticks ½ cup, with Peanut Butter – 2 tbs and *raisins – 2 tbs)

Lunch

Chicken Nuggets - 2 oz
With Barbecue Sauce or Honey – 1 tbs
Peas and carrots - ½ cup
Dinner Roll – 25 gm or 0.9 oz
Apple Slices - ¼ cup
Milk - 1 cup (8 fl oz)

Day 2

Ready-to-Eat-Cereal – ¾ cup
Sliced Pears - ½ cup
Milk - 1 cup (8 fl oz)

Soft Pretzel – 25 gm or 0.9 oz
Orange Juice - ¾ cup

Turkey Burger (cooked, 2 oz)
on Whole Wheat Roll – 25 gm or 0.9 oz
Lettuce and Tomato (optional)
Baked Potato Wedges - ½ cup
Green Beans - ¼ cup
Chocolate Milk - 1 cup (8 fl oz)

* Extra food added; not required to meet meal pattern requirements.

Day 3

Breakfast

Bagel – 25 gm or 0.9 oz with Low fat Cream Cheese – 1 tbs
Citrus Sections – ½ cup
Milk – 1 cup (8 fl oz)

Snack

Low fat Raspberry Yogurt – 4 oz or ½ cup
Granola Bar, Plain – 50 gm or 1.8 oz
Water

Lunch

Submarine Sandwich (Hoagie)
(Ham – ½ oz, Turkey – ½ oz
Low fat Cheese – 1 oz
Lettuce and Tomato – ¼ cup
Italian Hoagie Roll – 25 gm or 0.9 oz
Watermelon Cubes – ½ cup
Milk – 1 cup (8 fl oz)
* Vanilla Pudding

Day 4

Granola Cereal with Raisins
(¾ cup or 1 oz)
Fresh Banana slices – ½ cup
Milk – 1 cup (8 fl oz)

Tortilla Triangles – 25 gm or 0.9 oz
(with Cheese Centers – 1 oz)
*Cherry Tomato Halves – ½ cup
Water

Tuna Chef's Salad
Tuna – 2 oz.
Lettuce, Tomato, Broccoli, Celery,
Cucumbers – ¾ cup
Pumpernickel Roll – 25 gm or 0.9 oz
Milk – 1 cup (8 fl oz)

* Extra food added; not required to meet meal pattern requirements.

Day 5

Breakfast

Blueberry Muffin – 50 gm
or 1.8 oz
Sliced Peaches- ½ cup
Milk – 1 cup (8 fl oz)

Snack

Raw Vegetable Medley - ¾ cup
Broccoli, Carrot Sticks, Celery
Sticks and Cherry Tomatoes
Plain Yogurt - ½ cup
Water

Lunch

Mexican Pizza – 1
(Tortilla – 25 gm or 0.9 oz
1/8 cup of *Tomato Sauce, Refried
Beans -¼ cup and Low fat Cheddar
Cheese 1 oz)
Garden Salad – ½ cup
Pineapple Tidbits – ¼ cup
Milk - 1 cup (8 fl oz)

Day 6

Waffle – 31 gm or 1.1 oz
with Light Maple Syrup – 1 tbs
Blueberries - ½ cup
Milk – 1 cup (8 fl oz)

Fresh Fruit Cup - ¾ cup
Milk - 1 cup (8 fl oz)

Chicken Pita pocket
(2 oz Chicken, Pita Bread –25 gm or
0.9 oz, Lettuce and Tomato
– ¼ cup)
Coleslaw – ½ cup
*Grape Halves – ½ cup
Milk - 1 cup (8 fl oz)

* Extra food added; not required to meet meal pattern requirements.

Healthy Snack Ideas

Kids like to eat finger foods because they are: easy to handle, have different shapes, colors, and sizes; and are fun to pick up and explore. They can be dipped in a sauce; offer new tastes; and enable children to learn about new choices.

Choose items from the following food groups when planning snacks. Make use of fresh fruits and vegetables. Offer a selection of sauces and dips for children to choose.

Meat or Meat Alternates

Cheese cubes	Peanut butter
Cheese sticks	Almond butter
Turkey rollups	Yogurt
Beef cubes	

Vegetables (light steaming or cooking may increase acceptability of some of the following)

Asparagus spears	Mushrooms
Carrot coins	Snow peas
Carrot sticks	Peas
Celery sticks	Radishes
Broccoli	Sweet potato cubes
Cabbage wedges	Tomato wedges
Corn	Turnip sticks
Green pepper sticks	Zucchini sticks

Fruits

Fresh fruit wedges, such as peach, pear, watermelon, plum, pineapple, and cantaloupe	Kiwi slices
Pitted prunes	Nectarines
Berries (in season), such as blueberries, raspberries, and strawberries	Papaya
Cherries, pitted	Banana slices
Dried fruits	Grape halves
	Honeydew cubes
	Raisins
	Tangelos
	Tangerine sections
	Melon balls

Full - Strength Juices

Apple	Pineapple
Grape	Prune
Grapefruit	Tangerine
Grapefruit-orange	Tomato
Orange	Vegetable

Any blend or combination is acceptable.

Grains and Breads (Whole grain or enriched)

Pita bread triangles	English muffin cubes
Crackers	Cheese toast strips
(all varieties)	Croutons
Graham crackers	Oyster crackers
Bread cubes	Pizza sticks
Bagel bites	Waffle squares
Cereals, dry (any variety)	Tortilla pieces
Granola	Wafers

Dips and Sauces

Yogurt dip	Fruit-based dip
Salsa and refried bean dip	Cheese, melted
Sweet and sour sauce	Cucumber sauce
Barbecue sauce	

Caution: Children under 5 years are at the highest risk of choking on food and remain at high risk until they can chew better. **Items such as whole grapes, corn, peas, hot dogs, and hard raw vegetables should be sliced or diced for children to swallow more easily.**

Easy Salad Ideas

Give participants a choice of low fat dressings in which to dip their carrot, celery, cucumber, and zucchini sticks.

Salad Dressings

- Make a "quick" Russian dressing with low fat mayonnaise and catsup; serve it over cut-up lettuce.
- Use lemon juice instead of vinegar when making a homemade Italian dressing. It tastes less harsh to children.

- Make a quick and tasty French dressing in the blender with tomato soup, onion, sugar, vinegar, and oil.
- Bottled reduced fat coleslaw dressing makes a great-tasting white French dressing.
- Make a quick ranch dressing: 1 cup each of low fat mayonnaise, low fat yogurt, buttermilk; flavor with oregano and dried parsley.

Vary the look of your pasta salads with a combination of pastas: wagon wheels, shells, twists, or elbows, all in the same salad!

Instead of pasta salad, how about "rice" salad?

To save time in making pasta salad, use thawed frozen vegetables. (There is no need to cook; they're blanched already).

Try an antipasto lunch. Arrange on a small plate: chunks of tuna, wedge of hard cooked egg, slices of beet, halved cherry tomatoes, cooked green beans, cooked potato slices. Include a small cup with Italian dressing.

Add color and extra vitamins to coleslaw with red cabbage (as well as white), green pepper dices, and grated carrot.

Make a honey dressing for fruit: low fat yogurt, honey, and orange juice concentrate for flavor.

The Eating Environment

In this section, you will find information on:

- how to make mealtime at your site a pleasant experience;
- the importance of nutrition education for participants; and
- tips on fun nutrition education activities.

A pleasant eating environment is another important key to healthy eating. Bringing participants and foods together in a happy meal setting is as important as what participants should eat. Pleasant eating experiences form habits and attitudes that can last a lifetime.

Making Mealtime A Happy Time

Encourage good experiences with food and eating by:

- Getting to know each participant 's personality and reaction to foods.
- Allowing participants to take their own time to eat. Let them follow their own "time clock". Eating in a hurry may spoil the pleasure of eating.
- Not forcing children to eat. They can be picky-eaters.
- Offering a variety of foods in different ways.

The Physical Environment

If you are serving food inside a building:

- Make sure the room or setup is attractive and clean.
- Use bright colors and decorations that children like.
- Offer good lighting and proper air circulation.
- Provide chairs, tables, dishes, glasses, plastic ware, and serving utensils that are appropriate for participants.
- Arrange food on plates and garnish serving lines to make meals attractive.
- Avoid delays so participants do not have to wait.
- Have participants help set the table, carry food to the table, or help clean up after eating.

If you are serving food outdoors:

- Be sure food is safe to eat by providing ice or refrigeration for cold foods, and warmers for hot foods.
- Remember, nutrition is important but extra "other foods" can be served that provide additional energy on a hot day, such as ice cold fruit pops or ice milk treats.
- Look into using refrigerated trucks or warmers for keeping food at safe temperatures. Proper refrigeration is necessary and must be accommodated if food is to be transported. For more information, refer to the section on Food Safety, beginning on page 69.
- It's important to check food on delivery for proper temperatures. Make sure thermometers are available to check on food. Keep hot food at 140 °F or above and cold food at 40 °F or below.

A Healthy Atmosphere

- Provide a quiet time just before meals so that mealtime can be relaxed.
- Encourage a friendly atmosphere.
- Talk about foods, the colors, the shapes, the sizes, and where they come from.
- Encourage participants to talk about their food experiences—how the food tastes and smells.
- Allow enough time for participants to eat and experience healthy eating.
- Offer nutrition education activities.

Nutrition Education

Nutrition education is learning about foods and how they are important to health. Nutrition knowledge helps participants adopt healthy eating habits.

Promote Nutrition Education Activities

Nutrition education is an important part of serving meals to children and/or eligible, disabled adults participating in SFSP. Encourage your staff to provide a variety of activities to help participants:

Nutrition education is learning about foods and how they are:

- important to health. Nutrition knowledge helps participants adopt healthy eating habits;
- develop positive attitudes toward nutritious meals;
- learn to accept a wide variety of foods;
- establish good food habits early in life; and
- share and socialize in group eating situations.

The teaching of nutrition principles is most effective when you combine concepts with other learning experiences. Learning is reinforced when participants have an opportunity to practice what you teach them.

Introducing new foods to participants can be an educational experience. Foods, like a bright orange, a rosy apple, or a bright green pepper, can be an introduction to new colors, different shapes, textures, and smells. A child may reject a food simply because it is unfamiliar. Seeing, touching, tasting new foods, and preparing familiar foods in a different way, can lead to better acceptance. Organize tasting parties to offer participants a taste-test of a variety of food items.

Play a Game: What's the Mystery Food? Place the child's hand in a paper bag containing a fruit or vegetable. If he or she cannot identify the fruit or vegetable, select several children to peek into the bag and provide clues.

Another Activity: A Food Match: Name as many vegetables as you can that are green...purple...yellow, or that start with the letter B.

Children like being involved in preparing meals and snacks. Have children measure ingredients with kitchen measuring cups and spoons. Teach children the origin of foods and the events that lead up to serving a meal. Plant a garden together, inside or out, or create an edible landscape with herbs.

Children can learn many things from field trips. They can discover how food is produced, prepared, and sold. If possible, plan excursions to a farm, market, grocery store, dairy, or bakery. After the trip, have children role-play to recall what they learned. Promote other recreational activities such as food drawings, stories, puppet plays with food characters, songs, and games to help children develop wholesome attitudes toward nutritious foods.

Menu Promotions

In this section, you will find information on:

- how to “merchandise” your meals; and
- a few interesting “theme” menus.

Introducing New Recipes

New recipes should be introduced gradually; consider trying one per week.

Try a new recipe at snack time—a time for "something extra", a time of surprises. Always have an alternate choice so no one feels left out if they don't care to try the new item. Give just a taste: one fourth of a serving, then nothing would be wasted.

Merchandising Meals

Advertise—put up posters and pictures to illustrate what is currently being served.

"Dress" in costume for an occasion or special activity.

Surround the meal with "go withs" that are commonly accepted: i.e., cornbread, pork and beans. Go ethnic all the way!

Let every Monday or Thursday, be "New Recipe Day"—something to look forward to....

Serve lunch in a paper bag and let each participant sit where he/she chooses, like at a picnic. Spread a blanket....

Dream up a new way to serve a familiar food: cut sandwiches into triangles, fingers. Flavor and color milk pink with pureed strawberries. Let children drink their milk from straws. Serve spaghetti or chow mein in a Chinese carry out bucket. Use colored plastic spoons. Garnish soup with popcorn or homemade croutons made from leftover bread (note that this could be a choking hazard for children under 4). Offer variety wherever possible: choice of toppings for a hamburger (self-serve style, of course!), choice of toppings for ice cream, choice of toppings on pizza...

Talk about a new food beforehand: a little education goes a long way. How were the foods grown? Where were they grown? How do the foods look when they are raw? Compare it to another food that is already familiar. What makes it nutritious? What are other names for this food (or dish)? Why is it called what it is? From what culture did it originate? In what culture is it found today?

Self-Serve Style

Participants generally eat what "they" choose.

SUMMER FRUIT SALAD BAR

peeled kiwi chunks
canned pineapple chunks
fresh orange chunks
banana wheels
canned pear chunks or
peach slices
grapes or berries (if in
season)
honey dressing
pita bread circles
tortilla rounds

BAKED POTATO BAR

whipped margarine
plain low fat yogurt
sautéed mushrooms
sliced green onions
steamed diced broccoli
cooked bacon crumbles
shredded American cheese
mild salsa
chili con carne
baked potatoes

YOGURT SUNDAES (For Snack Fun)

plain low fat vanilla yogurt
fruit flavored low fat yogurt
granola
brown sugar
crushed canned pineapple
any fresh fruit in season
fruit salad
chocolate syrup
frozen, thawed
strawberries

TACO SALAD BAR

tortilla pieces
warm taco meat mixture
kidney beans or refried beans
diced fresh tomatoes
shredded lettuce
grated American cheese
mild salsa
baked potatoes

TOP-YOUR-OWN PIZZA BAR

red sauce
sliced mushrooms
diced green peppers
steamed broccoli florets
shredded mozzarella cheese
grated parmesan cheese
pita bread circles
cooked ground beef crumbles
pizza crust
tortilla rounds

TOP-YOUR-OWN HAMBURGER PATTY

pineapple slices (Hawaiian)
mild salsa (Mexican)
pizza sauce (Italian)
teriyaki sauce (Japanese)
barbecue sauce (American)
tomato slices
shredded lettuce
low fat mayonnaise
sliced cheese triangles

Questions and Answers

1. Why do I need to know about the *Dietary Guidelines for Americans*?

Children learn healthy eating habits at an early age. You have a unique opportunity to help them learn how to eat a more healthy diet, ensuring their future nutritional health. The *Dietary Guidelines for Americans* promote 3 basic messages: Aim for Fitness, Build a Healthy Base, and Choose Sensibly. These guidelines are intended for healthy children (ages 2 years and older) and adults of any age. The Dietary Guidelines for Americans are:

Aim for Fitness	• Aim for a healthy weight. • Be physically active each day.
Build a Healthy Base	• Let the Pyramid guide your food choices. • Choose a variety of grains daily, especially whole grains. • Choose a variety of fruits and vegetables daily. • Keep food safe to eat.
Choose Sensibly	• Choose a diet that is low in saturated fat and cholesterol and moderate in total fat. • Choose beverages and foods to moderate your intake of sugars. • Choose and prepare foods with less salt. • If you drink alcoholic beverages, do so in moderation.

2. What can I do to lower the amount of fat in the meals I serve?

There are many things you can do while preparing meals. For instance, you can bake or broil instead of frying; you can drain fat off meats before serving, or try combining beans with meat for variety. Serve fresh fruits and vegetables, or steam, bake or boil them until they're crisp or "al dente". Use margarine, butter and oil sparingly, and use herbs and spices for flavor. Use whole grain breads and other breads such as pita bread, bagels, muffins, and pancakes more often instead of higher fat items such as croissants, doughnuts, and sweet rolls. Further, offer low fat or non-fat milk to children over two years of age and/or eligible, disabled adults, and replace whole milk with low fat, buttermilk or reconstituted nonfat dry milk during food preparation.

3. What is a meal pattern requirement?

A meal pattern requirement is a listing of food components and serving sizes you are required to serve the participants in the SFSP. Each component in each meal must be present in order for you to receive reimbursement for that meal. When the meal pattern requirements are followed, not only do you receive proper reimbursement, but the participant eating the meal receives a well-balanced, nutritious meal that supplies the kinds and amounts of foods that will meet their nutrient and energy needs. You can find the SFSP Meal Pattern Requirements in this part of the handbook, beginning on page 14.

4. I have a few participants in my Program that need special meals. What should I do?

Sometimes participants have a disability or life threatening food allergy that prevents them from eating the same foods as the other participants. Such participants are still entitled to receive modified meals from the Program. You are required to provide those modified meals, provided the preparation of those meals does not cause your organization undue hardship. For participants with disabilities and life threatening food allergies that require specially prepared meals, you should receive and have on file a physician's statement. This statement, as a minimum, should outline the participant's disability or allergy, the major life activity affected by the disability or allergy, and the food or foods that should be omitted or substituted. This statement should also be signed by the licensed physician making the statement.

5. I keep hearing about "cycle menus"—what are they, and how do I set one up?

A cycle menu is a set of planned daily menus that are repeated in the same order for a period of time—usually 2, 3, or 4 weeks. The menu is different every day during the cycle. A cycle menu offers you variety and flexibility. Some of the things you can do to adjust a cycle menu is to replace foods that are not available; observe birthdays and other special occasions; introduce new foods or try new recipes; take advantage of seasonal foods or good buys, and use leftovers. A sample cycle menu can be found in this handbook.

6. How can I make mealtime more “fun” for the participants I serve?

There are a lot of things you can do to make the eating experience a more pleasant one. The first thing to know is the participants themselves. Each participant reacts differently to different foods, and eats in his or her own way. Remember to never force a participant to eat, and to give them enough time to eat. The environment you provide is important - a clean area with bright colors; age-appropriate seating, tables and utensils; and presenting attractive meals at the proper temperatures helps. Giving the participants quiet time before meals and having them help clean up afterwards can also help them have a positive meal experience.

7. How can I “merchandise” my meals to participants?

You can do all sorts of things to make participants look forward to the meal service! Advertise the meal with posters and pictures or dress in costumes for a special occasion or activity. Adding “go-with” food items to standard menus, or serving ethnic foods are ways to “spice up” a meal as well as an opportunity for an education lesson. Serving a familiar food in a new way, or serving the meal in a different setting can also make mealtime fun! There are additional ideas for promoting your meals in this Part.

PART II — NUTRITION SERVICES

Food Service Staff

In this section, you will find information on:

- how to hire and manage the staff necessary to run your food service; and
- what you should do to prepare and train those staff members.

Selecting Staff

Sponsors who prepare meals on-site or in a central kitchen are responsible for choosing staff, including a food service manager, food production staff and general kitchen help. The number of food service employees will depend on the number and type of meals prepared. The following staffing schedule is provided as a guide for a Program serving lunches and snacks.

Number of Meals	Hours of Labor	Staff Needs
up to 50	6 to 8	1 full-time employee
51 to 100	8 to 10	1 full-time employee* 1 part-time employee**
101 to 200	12 to 20	2 full-time employees* 1 part-time employee**
201 to 300	20 to 24	3 full-time employees* 1 part-time employee**

* These full-time employees can be scheduled for only the hours they are needed and may not be required to work an 8-hour day.

** These part-time employees may be optional or as needed, based on menu requirements.

The range of hours for labor varies based on the skills of the food service employees and the convenience foods used in the menus. If the sites serve breakfast, add 1 hour of labor for each 50 breakfasts prepared. Sites require less time for labor when serving snacks than when serving breakfast or lunch.

- Determine the number of staff you will need. The type of employee and the amount of experience will vary with the duties each will perform.
- For the position of food service managers, consider someone with a food production or nutrition background with food service experience.
- Use qualified volunteers to help you operate the Program. Parents or supervisory adults may offer help during the service of the food. Parent involvement should be encouraged. They often see it as a benefit too!
- All food service employees should meet the health standards set by local and State health authorities.

Training Staff

Once you have selected your food service staff, plan to train them in Program operations. Introduce staff to each other and help them to understand:

- goals of SFSP;
- meal pattern requirements;
- importance of preparing nutritious meals that meet the *Dietary Guidelines for Americans*;
- food safety rules and sanitation guidelines; and
- food production records;
- operation of food service equipment; and
- developing and following standardized recipes.

Develop a job description for each food service position. Job descriptions identify duties and responsibilities for each position. A sample position description for a cook is provided in the Reference Section.

Food production employees will have food preparation duties and must be shown how to fill out the necessary food production records. They must know how to use recipes and meet the necessary meal pattern requirements.

Other personnel will have food service or cleanup duties and responsibilities. Write down the requirements of the job and go over the schedule of activities.

Offer training on an informal or formal basis. Have regular meetings. Get input from your staff on an on-going basis. Encourage new ideas on how to improve the current menu, food production, and food service areas. Ask employees what they would like to see to make their jobs better.

Training Resources

Contact the State administering agency for training materials promoting nutrition education, food safety information, recipes, etc. Video packages are available for group training or self-study. Check the Information Resources list provided in the Resource Section.

Food Purchasing and Production

In this section, you will find information on:

- where to buy your food;
- what food to buy and how much; and
- how to use the Food Buying Guide.

Getting the most for the food dollar takes careful planning and buying. Careful use of food buying power will not only help control your food costs, but will also reduce waste and help upgrade the quality of meals.

Success in food buying depends on getting good-quality foods in the proper quantities at the best possible prices. The proper quantities of foods to buy depends on the number of participants eating at the site, the menus and recipes you use, the amount and kind of storage space available, inventory on hand, perishability of the food, and the length of time the order covers. In addition to this guide ask for a copy of USDA's *Food Buying Guide for Child Nutrition Programs*, PA-1331, from your administering agency.

Where To Buy Foods

Consider where to buy foods:

- Find out which food companies (suppliers) in the area offer foods that will help you meet the recommendations of the Dietary Guidelines, can supply foods you will use frequently, and will provide the services you require (prompt and frequent delivery, credit, discounts).
- Buy from suppliers who provide the best quality foods at the most reasonable prices.
- Follow a strict code of business ethics when you purchase foods for the Program. Know what the food suppliers expect, and let them know what you expect of them.

To help you decide what to buy:

- Read the label and be familiar with nutrients and ingredients.
- Buy federally inspected meats and poultry.
- Purchase only pasteurized milk and milk products that meet State and local standards.

- Purchase bread and bread products that are properly wrapped or kept in paper-lined containers with covers to keep them fresh and wholesome. Check dates on packages of bread and bread products to be sure that they are fresh.
- Purchase frozen foods that have been kept frozen solid. Do not accept delivery of frozen foods that are, or have been, thawed or partially thawed.
- Purchase perishable foods that have been kept under refrigeration.

Food Specifications

A food specification is a detailed or specific list of the desired characteristics of a food product. How you plan to use the food determines both the form and quality that you should buy. Consider the product's style, size, count, container, and packing medium. Also, buy seasonally and locally to help keep food costs lower, e.g., farmers' markets.

- Provide the supplier with clear specifications for each food item ordered.
- Upon delivery of the order, check to see that the food meets the specifications and is in good condition.

Specification Criteria

- Name of product or Standard of Identity.
- Grade, brand, type.
- Size of container.
- Unit size.
- Description.
- Delivery requirements.
- Sanitation conditions expected.
- Provisions fair to seller and protective to buyer.
- Tolerance level accepted.

- Estimated product usage.
- Condition of the product.

Sample Specification Bid

Peaches, Cling

Purchase Unit: Number 10 can, 6 cans per case

Style: Halves, Slices

Type: Yellow, Cling

Grade: U.S. Grade B (Choice)

Count: 36-54 Halves

Packing Medium: Light Syrup

Net Weight: 108 ounces

Drained Weight: 66½ ounces

Yellow cling peaches should have reasonably uniform color that is practically free from any brown color due to oxidation. They should be reasonably uniform in size and symmetry and be reasonably free from defects such as blemished, broken, crushed units, and peel. Units should be reasonably tender and have texture typical of properly ripened fruits, not more than slight fraying.

Watch for: Off-color or wide-color variation. Excessive variation in size, symmetry, and thickness. Discoloration, excessive softness, or hard units. Crushed or broken pieces, presence of excessive loose pits, stems, and leaves.

For more in-depth information and a detailed guide to writing food specifications, you can order *Choice Plus: A Reference Guide for Foods and Ingredients* from the National Food Service Management Institute (NFSMI). For contact information, see the Information Resources section.

How Much to Buy

- Review the cycle menu.
- Determine the recipes to use.
- Calculate the quantities of food you need to meet meal pattern portions.
- Compile the "grocery list" of foods and quantities you will need to buy.
- Check your inventory to determine what is on hand and subtract that from the list of foods to purchase.
- Keep in mind the size of the storage facilities and buy only the quantities of food that you can store properly.
- Buy only the products you need.

When To Buy Food

The following guidelines can help you decide when to buy each type of food.

- Buy bread, milk, and produce every day or every 2 days if storage allows.
- Buy perishable foods, such as meat, fish, poultry, and frozen foods, in quantities that can be stored in the refrigerator and freezer. Check the Refrigerated and Frozen Foods Chart in the Food Safety Section for length of time to keep perishables in the refrigerator or freezer.
- Buy canned foods and staples monthly or twice a month if dry storage is available.

You will find Buying Calendars for Fresh Fruits and Fresh Vegetables featured in the Reference Section.

How To Use The Food Buying Guide

USDA's *Food Buying Guide for Child Nutrition Programs*, PA-1331, has been designed to help determine quantities of food to purchase for use in preparing meals for participants.

Use the *Food Buying Guide* and the following steps to determine how much food to buy:

1. Determine the serving size and the total number of servings needed for each food item as follows:

For *meat, poultry, fish or cheese*, multiply the number of servings times the serving size (in ounces) to get total ounces needed.

For *vegetables and fruits*, the *Food Buying Guide* lists amounts to buy based on $\frac{1}{4}$ cup servings. Therefore, to calculate the amount to purchase, convert your serving size to the number of $\frac{1}{4}$ cup servings. This is done by dividing the serving size by $\frac{1}{4}$ and then multiplying the result by the number of servings to get the total number of $\frac{1}{4}$ cup-servings needed. See examples below.

2. Divide the amount needed (total ounces of meat or total number of $\frac{1}{4}$ cup servings of the vegetable or fruit) by the number of servings per purchase unit (from column 3 of the *Food Buying Guide* for the food you want to use).

$\frac{\text{Amount needed}}{\text{No. of servings per purchase unit}}$

Example A: Canned-Sliced Cling Peaches

1. Serving size: $\frac{1}{2}$ cup
Number of servings: 50
2. Calculate the number of $\frac{1}{4}$ cup servings:
 $\frac{1}{2} \div \frac{1}{4} = 2 \times 50 = 100$ $\frac{1}{4}$ cup servings
3. Amount needed (no. of $\frac{1}{4}$ cup servings) $= 100 \div 47.5^* = 2.1$ cans
Servings per purchase unit

* Servings per purchase unit is the number of servings per can = 47.5.

Example B: Carrot Sticks

1. Serving size: $\frac{1}{4}$ cup
Number of servings: 50
2. No conversion is needed because the serving size is $\frac{1}{4}$ cup.
3. $\frac{\text{Amount needed (no. of } \frac{1}{4} \text{ cup servings)}}{\text{Servings per purchase unit}} = 50 \div 10.3^* = 4.85$ or 5 lbs.

* Servings per purchase unit is the number of servings per pound = 10.3.

Example C: Ground Beef, market style, no more than 20% fat

1. Serving size: $1\frac{1}{2}$ oz
Number of servings: 50
2. Number of servings x serving size = total ounces needed
 $50 \text{ servings} \times 1\frac{1}{2} \text{ ounces} = 75 \text{ ounces}$
3. $\frac{\text{Amount needed (total ounces)}}{\text{Servings per purchase unit}} = 75 \div 11.8^* = 6.4$ pounds

* Servings per purchase unit is the number of 1 oz. servings per pound = 11.8.

Receiving Food

- When receiving food deliveries from vendors, use the following guidelines:
- When the delivery truck arrives, make sure that it looks and smells clean, and is equipped with the proper food storage equipment.
- Examine all food upon delivery to be sure it is not spoiled, dirty, infested with insects, or opened.
- Do not accept foods that fail to meet your food specifications.
- Do not accept foods that are not on the order form or are in poor condition.
- Check the temperature of all refrigerated and frozen foods to ensure that they are within proper ranges.
- All perishable foods (milk, eggs, cheese, fresh meats, poultry, fish, lunch meats, etc.) should have either an expiration date or a “sell by” date on the packaging.
 - ⇒ If the food has an expiration date, do not accept it if the date has passed.
 - ⇒ If the food has a “sell by” date, check it to make sure that you will be able to use the product within a reasonable amount of time.
- Make sure that frozen foods are in airtight, moisture-proof wrappings.
- Do not accept foods that have been thawed and refrozen. Signs of this are large ice crystals, large areas of ice, or excessive ice in containers.
- Do not accept frozen foods that have started to thaw.
- Do not accept cans that have any of the following: no labels, swollen sides or ends, flawed seals or seams, dents or rust.
- Do not accept dairy, bakery and other foods delivered in flats or crates that are dirty.
- If applicable, check the manufacturer’s “use by” or “best before” dates for non-perishable items to ensure that you will be able to use the products within a reasonable amount of time.

Food Service Quality

In this section, you will find information on:

- how to prepare foods;
- menu production records;
- how to work with quantity recipes; and
- common measures and portion control.

Food Production

Serving acceptable and nutritious foods depends not only on good planning, selection, and storage, but also on good food preparation using standardized recipes whenever possible. Determine how much food to prepare by (1) examining the menu (which shows the kinds of foods to prepare and the serving size of each), (2) determining the total number of participants you will serve, and (3) becoming familiar with food yields (the number of servings you can obtain from a purchase unit). Charts in the Reference Section provide information on serving sizes, yield of servings, and yield of selected foods.

Tips for Food Preparation

- Wash fresh fruits and vegetables with water (no soap) and use a brush if necessary to remove soil. Trim carefully to conserve nutritive value. Remove damaged leaves, bruised spots, peels, and inedible parts. Use a sharp blade when trimming, cutting, or shredding to avoid further bruising and loss of nutrients.
- Steam or cook vegetables in small batches for best quality. Cook until tender-crisp, avoid over cooking, using as little water as possible to help retain vitamins and minerals.
- Add only a small amount of salt, if any, to water or to foods when cooking.
- Add only a small amount of salt, if any, to water or to foods when cooking.
- Cook potatoes in their skins to help retain their nutritive value.
- Trim visible fat from meats and meat products.
- Cook cereals and cereal grains according to cooking directions.
- There is no need to rinse or drain the cereals or cereal grains such as rice after cooking.
- Use seasonings sparingly. Think of participants' tastes and preferences.
- Follow standardized recipes exactly. Measure and weigh ingredients precisely and follow procedures carefully. This includes using equipment, time, and temperature as specified in the recipe.
- Serve portion sizes as specified in the recipes and menus. Use

correct serving utensils to portion foods.

Menu Production Records

Maintain *daily* menu production records to document the types and quantities of foods prepared to meet USDA requirements for the number of meals claimed for reimbursement. The Reference Section of this guide includes a sample Daily Menu Production Worksheet for this purpose and instructions for its use.

Using Standardized Recipes

A standardized recipe is a recipe that gives the same good results every time. It specifically describes the amount of ingredients and the method of preparation needed to produce a consistently high-quality product. A sample standardized recipe is included in the Reference Section. It specifies number of portions and sizes of serving utensils for correct portions.

Contact your State agency for copies of recipes for use in the Program. Other recipes from associations, the food industry, and reliable cookbooks may provide variations for you to use from time to time.

How to Use Quantity Recipes

To use quantity recipes properly, follow these steps:

1. Read the entire recipe carefully before beginning preparation and follow directions exactly.
2. Adjust the food quantities in the recipe to provide the number of servings you require.
3. Determine the amount of food needed for preparing the recipe. (Refer to the section on *How To Use the Food Buying Guide*.)
4. Collect the necessary utensils and ingredients.
5. Weigh and measure ingredients accurately. Weigh ingredients whenever possible since weighing is more accurate. If you must measure ingredients, use standard measuring equipment.
6. Follow directions carefully for combining ingredients and cooking the product. Note that quantity recipes may take more time to prepare, for example, if you need to thaw a large amount of frozen meat.
7. Serve portion size according to recipe.

Abbreviations Used in Recipes

AP----as purchased	qt----quart
EP----edible portion	gal---gallon
Cyl---cylinder	oz----ounce
pkg---package	fl oz--fluid ounce
tsp---teaspoon	No.----number
Tbsp--tablespoon	wt----weight
lb----pound	incl--including
pt----pint	excl--excluding

Equivalent Measures

1 tablespoon = 3 teaspoons	1 cup = 16 tablespoons
1/8 cup = 2 tablespoons or 1 fluid ounce	1/2 pint = 1 cup or 8 fluid ounces
1/4 cup = 4 tablespoons	1 pint = 2 cups
1/3 cup = 5 1/3 tablespoons	1 quart = 4 cups
3/8 cup = 6 tablespoons	1 gallon = 4 quarts
1/2 cup = 8 tablespoons	1 peck = 8 quarts (dry)
2/3 cup = 10 2/3 tablespoons	1 bushel = 4 pecks
3/4 cup = 12 tablespoons	1 pound = 16 ounces

Portion Control

- Serve each meal as a unit.
- Serve all of the required food items in the proper amounts.
- Use proper serving utensils (Example: a #16 scoop makes a 1/4 cup serving).
- Train employees to recognize proper portion sizes.
- Provide a sample plate containing the proper amounts of food as an appealing example.

Measures for Portion Control

Scoops, ladles, and serving spoons of standard sizes provide dependable measures and help serve food quickly.

Scoops

The number of the scoop indicates the number of scoopfuls required to make 1 quart. The following table shows the level measure of each scoop in cups or tablespoons:

Scoop No.	Level Measure
6	$\frac{2}{3}$ cup
8	$\frac{1}{2}$ cup
10	$\frac{3}{8}$ cup
12	$\frac{1}{3}$ cup
16	$\frac{1}{4}$ cup
20	3 $\frac{1}{3}$ tablespoons
24	2 $\frac{2}{3}$ tablespoons
30	2 tablespoons
40	1 $\frac{2}{3}$ tablespoons

Use scoops for portioning such foods as drop cookies, muffins, meat patties, and some vegetables and salads.

Ladles

Use ladles to serve soups, stews, sauces, and other similar products. The following sizes of ladles are most often used for serving meals:

Number on Ladle	Approximate Measure
1 fluid ounce.....	$\frac{1}{8}$ cup
2 ounces.....	$\frac{1}{4}$ cup
4 ounces.....	$\frac{1}{2}$ cup
6 ounces.....	$\frac{3}{4}$ cup
8 ounces.....	1 cup
12 ounces.....	1 $\frac{1}{2}$ cups

Serving Spoons

You could use a serving spoon (solid or perforated) instead of a scoop. Since these spoons are not identified by number, you must measure or weigh the quantity of food from the various sizes of spoons you use in order to obtain the approximate serving size you need. You may want to keep a list of the amount of food each size spoon holds as an aid for the staff serving the food.

Food Service

Even when food is ready to serve, food service staff must continue their efforts to maintain food quality and avoid food contamination.

- Maintain foods at proper temperatures before and during service. Hot foods must be 140 °F or above and cold foods must be at 40 °F or below. Use food thermometers to determine temperatures.
- Use correct serving utensils to get the correct portion size. Be consistent in portion sizes.
- Serve meals as a unit with only one meal served per participant.
- Keep an accurate count of the number of participants and adults you serve.
- Encourage a pleasant eating environment that will support mealtime as a learning experience.

Food Storage

In this section, you will find tips on:

- how to properly store your food; and
- how to keep food inventory records.

Storage Facilities

Good storage facilities—dry, frozen, and refrigerated—help keep food safe, fresh, and appetizing. Food products must be in excellent condition when they arrive at the receiving area. They must be kept that way as you store, prepare, and serve them.

Food must be kept dry and stored off the floor in dry storage areas. Cold refrigerated or frozen storage must maintain proper temperatures.

Guidelines for Proper Storage

- Examine all food upon delivery to be sure it is not spoiled, dirty, infested with insects or opened. Do not accept or use bulged or unlabeled cans. Do not accept frozen foods that have started to thaw. Send these items back.
- Store all food off the floor on clean racks, dollies, or other clean surfaces. Pallets and dollies should be at least 6 inches off the floor to permit cleaning under them.
- Keep storage rooms clean, sanitary, and free from rodent infestations. Clean on a rotating schedule.
- Protect foods such as flour, cereals, cornmeal, sugar, dry beans, and dry peas from rodents and insects by storing them in tightly covered containers.
- Use foods on a "first-in, first-out" basis. Arrange foods so that older supplies will be used first. Label shelves if necessary.

Food Inventory Records

Keep accurate and up-to-date inventory records which include:

- date you order the food;
- name of the supplier;
- date received;

- condition on arrival;
- price paid; and
- amount left.

These records are helpful in planning future purchases and menus. Records on the cost of the food are important for claiming reimbursement.

A sample inventory form is provided in the Reference Section of this guide. Use this form as a guide for determining the value of foods used during a reporting period. This may be obtained by taking a physical count of foods on hand (closing inventory), obtaining the value of these foods from invoices, and calculating the total value of food on hand.

$$\text{Quantity} \times \text{Unit Cost} = \text{Total Value}$$

Take an inventory; that is, any stock you have on hand at the beginning of Program operations as "beginning inventory."

Beginning inventory of a given period is the same as the ending inventory of the preceding period.

Cost of food used is the beginning inventory plus food received, minus the ending inventory. The dollar value of food received is obtained from the receipts or invoices for the reporting period. Report the cost of the food you **used**. Do *not* report the cost of all the food **purchased**.

Food Sanitation

In this section, you will find information on:

- some common-sense rules on food sanitation; and
- tips on dishwashing, cleaning, and sanitizing.

Sanitation ensures a safe and clean environment for serving food to participants. Proper cleaning can reduce the risk of food borne illness.

Food Sanitation Rules

Follow these rules:

- **Wash hands** thoroughly with soap and warm running water for 20 seconds before handling food or utensils. **Wash hands** after each visit to the restroom (this also applies to participants).
- **Wash hands** and **sanitize** utensils, cutting boards, and work surfaces thoroughly after each contact with raw eggs, fish, meats, and poultry. **Sanitize** between use for raw and cooked, or use separate plates or equipment. (See page 71 for how to sanitize.)
- Thoroughly rinse with water all fresh fruits and vegetables before cooking or serving. Do not use soap, as it can leave residue.
- Properly **clean** and **sanitize** serving and cooking utensils, and equipment.
- Handle serving utensils and plates without touching the eating surface.
- Use disposable plastic gloves, as required by local health codes. Use gloves for only one task and throw away.
- Keep hands off face and hair. Wash hands if touched.
- Wear clean uniforms and hair restraints.
- Food service staff with open cuts, sores, colds, or other communicable diseases should not prepare or serve food.
- Properly **clean** and **sanitize** all food preparation and service areas; wipe up spilled food immediately.

- Empty garbage cans daily. They should be kept tightly covered and thoroughly cleaned. Use plastic or paper liners.
- Meet health standards set by your State and local health department.

Cleanup

Give careful attention to cleanup procedures following food preparation and service. If you use disposable ware (dishes, trays, utensils, glasses, etc.), promptly and carefully remove the disposable items from the site. If you use permanent ware, you must make sure to wash and sanitize them after each use.

Dishwashing Procedures

Whether washing dishes by hand or by machine, the procedures include, as a minimum, the following:

- Scrape and pre-rinse before washing.
- Wash with detergent solution in hot water (100 °F to 120 °F if washing by hand; 150 °F if washing by machine).
- Rinse with clear, hot water between 120 °F to 140 °F.
- Sanitize with a final rinse of at least 170 °F for 30 seconds or a final rinse containing a chemical sanitizing agent.
- Air dry on a clean rack.
- Store in a clean area, protected from contamination.

Cleaning and Sanitizing

In addition to the cleanup of disposable or permanent ware, you must properly clean and sanitize food preparation and service areas (equipment, floors, etc.). A cleaning schedule should be part of the overall work schedule to assure that the site is cleaned regularly. If serving meals outdoors - clean picnic tables, serving tables, or cover with disposable table cloths.

What's the difference between cleaning and sanitizing? Cleaning is removing food, grease, sauces, dirt and dust, etc., from a surface generally with a detergent and water. **Sanitizing** is the reduction of bacteria and viruses that may be on a surface with a special solution. Household bleach is a sanitizer that is inexpensive and is approved by your local health department. Make sure to sanitize food preparation areas, tables, countertops, cutting boards, drying racks, and sinks.

How to Sanitize

- **Mix 1.5 teaspoons to 1 tablespoon** (do not exceed 1 tablespoon) of bleach to one gallon of **warm** water. Label mixture in a spray bottle. For maximum effectiveness, mix fresh bleach solution every day. Any leftover solution should be discarded at the end of the day.
- Clean surface with warm soapy water.
- Rinse with water.
- Spray with sanitizing solution and wipe with paper towel.
- Air dry. (No need to rinse off the sanitizing solution)

Food Safety

In this section, you will find information on:

- the importance of food safety;
- safe food temperatures;
- food borne illnesses and *E. coli*; and
- cooking with microwave ovens.

Importance of Food Safety

What is food borne illness? Food borne illness is sickness that is caused by certain forms of bacteria and other disease agents that are present in our environment. Food handling errors made in food service institutions or at home may also cause food borne illness.

Recent outbreaks of food borne illness have caused several children to get sick and even die from food containing *E. coli* bacteria. Read the *E. Coli Report* contained in this section. In general, children, pregnant women, the elderly, and those who have chronic illnesses, or compromised immune systems are most at risk for developing food borne illness. Proper food handling and cooking is the best way to prevent this from happening in your summer food service setting. If you suspect cases of food borne illness at your SFSP site(s), follow the procedures outlined in the Reference Section.

Keep Food Safe

Food borne illness is caused by bacteria that multiply rapidly within the Danger Zone (40 °F to 140 °F). It is important to keep food safe, that is, to keep the internal temperature of cooked foods that will be served hot at 140 °F or above. Foods served cold should be kept at 40 °F or below.

When cooking, using methods such as boiling, baking, frying, and roasting, internal temperatures of food need to reach 165 °F to kill bacteria that can cause food borne illness. Microwave heating requires the temperature to be 165 °F or higher. As soon as possible, but no longer than 2 hours after cooking, refrigerate (40 °F or less) leftovers in pans 2" deep or less to halt the growth of most, but not all, of the bacteria that may have contaminated the food after cooking. Never let perishable food remain any longer than necessary in the danger zone (40 °F to 140 °F). Freezing food at 0 °F or less can stop bacterial growth but will not kill bacteria that are already there. Reheat foods at or above 165 °F to kill the bacteria.

To prevent food contamination, be sure that everything that touches food during preparation and service is clean. Fresh fruits and vegetables also need to be clean. Wash fresh produce under cold running tap water to remove any lingering dirt. If there is a firm surface, such as on apples or potatoes, the surface can be scrubbed with a brush. Cut away any damaged or bruised areas. Use food thermometers while cooking, holding, and serving food. Insert the thermometer in the center part of the food item to be checked. Be sure temperatures are read properly and often. Also, place appliance thermometers in the refrigerator and oven.

Using a Food Thermometer

Using a food thermometer is the only sure way to tell if the food has reached a high enough temperature to destroy harmful bacteria. Always check the temperature of foods to make sure that they are thoroughly cooked (see page 72 for minimum temperatures).

- Use a metal-stemmed, numerically scaled thermometer, accurate to plus or minus 2 degrees F.
- Sanitize the thermometer before each use with a sanitizing solution (see page 68).
- Check the food temperature in several places, especially in the thickest parts.
- To avoid getting a false reading, be careful not to let the thermometer touch the pan, bone, fat or gristle.
- For poultry, insert the tip into the thick part of the thigh next to the body.

For additional information, visit www.fsis.usda.gov/thermy/index.htm.

The Danger Zone

Food Temperature and Bacterial Growth

The Danger Zone	(Freezing) 0 - 32 °F	Some bacteria survive, but no growth occurs. Freezer should be set at 0 °F.
	32 - 40 °F	Refrigerator temperature permits slow growth of some spoilage bacteria.
	40 - 60 °F	Some growth of food poisoning bacteria.
	60 - 125 °F	DANGER -- Rapid growth of bacteria; some will produce toxin.
	125 - 140 °F	Many bacteria survive; some may grow.
	140 - 165 °F	High cooking and holding temperatures prevent most bacterial growth.
	165 - 212 °F	High temperatures destroy all known bacteria. Beware of toxins that may have already formed from improper handling.

MINIMUM INTERNAL COOKING TEMPERATURES	
Now comes the part that is most important —the minimum INTERNAL temperatures that food must <i>reach</i> to be considered safe to eat, no matter how you prepare them.	
Fresh ground beef, veal, lamb, pork	160 °F
Beef, veal, lamb -roasts, steaks, chops	
Medium rare	145 °F
Medium	160 °F
Well done.....	170 °F
Fresh pork -roasts, steaks, chops	
Medium	160 °F
Well done.....	170 °F
Ham	
Cook before eating	160 °F
Fully cooked, to reheat.....	140 °F
Poultry	
Ground Chicken, Turkey	165 °F
Whole Chicken, Turkey.....	180 °F
Breasts, roasts.....	170 °F
Thighs and wings	Cook until juices run clear
Stuffing (cooked alone or in bird)	165 °F
Egg dishes, casseroles	160 °F
Leftovers (including microwaved foods).....	165 °F

**Resource: Food Safety and Inspection Service
United States Department of Agriculture**

Common Food Borne Illness from Bacteria

Clostridium Perfringens

Cause: From undercooked, leftover, or poorly cooled meat products, bacteria grow in the danger zone when food is left out at room temperature or food is reheated and served again.

Symptoms: In 8 to 24 hours, diarrhea and gas pains, ending within 1 day.

Salmonella

Cause: Poor hand washing practices after using the bathroom; undercooked poultry or raw eggs; use of improperly sanitized utensils used previously on raw meat, poultry, or other foods.

Symptoms: In 12 to 36 hours, diarrhea, fever, and vomiting, ending in 2 to 7 days.

Staphylococcus Aureus (Staph)

Cause: Usually from food handlers who are sick. They may sneeze or cough or have skin infections that come in contact with food.

Symptoms: Within 2 to 8 hours after eating, vomiting and diarrhea lasting about 1 to 2 days.

Campylobacter Jejuni

Cause: Drinking untreated or unpasteurized milk; or eating raw or undercooked meat, poultry, or shellfish; or pets become infected and spread it to others.

Symptoms: In 2 to 5 days, severe even bloody diarrhea, cramping, fever, and headache lasting 2 to 7 days.

Clostridium Botulinum

Cause: From dented cans, loose jar lids, poorly processed canned foods.

Symptoms: Within 12 to 48 hours, the nervous system reacts (double vision, difficulty speaking, swallowing, droopy eyelids). **Can be fatal if not treated.**

... *E. Coli* Report...

According to USDA's Food Safety and Inspection Service (FSIS):

- Children under the age of 5 are particularly susceptible to *E. coli* 0157:H7 bacteria.
- While the bacteria can be spread through food, it can also be transmitted by person-to-person contact. Adults or children with diarrhea caused by *E. coli* 0157:H7, can easily spread the illness to others. It only takes a few *E. coli* 0157:H7 bacteria to make people sick.
- *E. coli* 0157:H7 has been most frequently linked to improperly cooked ground beef, but it has also been found in a variety of other foods including unpasteurized milk, unpasteurized apple cider and vegetables. It has also been traced to a variety of sites other than restaurants.
- Approximately 5 percent who become ill as a result of *E. coli* 0157:H7, especially children—progress to a life-threatening blood disorder called hemolytic uremic syndrome (HUS). About 15 percent of these patients die or suffer chronic kidney failure.

From USDA/FSIS, Food Safety Education Branch

What You Can Do

Remember this: One symptom of *E. coli* 0157:H7 food poisoning is bloody diarrhea. The Centers for Disease Control and Prevention (CDC) notes that young children and their playmates who are not toilet trained are especially likely to spread the infection. Medical treatment for the child is necessary. Consult the health department for advice on preventing the spread of infection if a child develops bloody diarrhea.

Proper handwashing procedures for both food preparers and participants are extremely important. **For participants:** careful handwashing with soap and warm water for 20 seconds will reduce the risk of spreading the infection. **For young children, frequent supervised handwashing with soap is particularly important. Participants should always wash their hands before eating.**

For food preparers: wash your hands with warm soapy water for 20 seconds (count to 30) before you handle food or food utensils. Wash your hands after handling or preparing food, especially after handling raw meat, poultry, fish, shellfish, or eggs. Right after you prepare these raw foods, clean the utensils and surfaces you used with hot soapy water. Replace cutting boards once they have become worn or develop hard-to-clean grooves. Wash raw fruits and vegetables under running water before eating. Use a vegetable brush to remove surface dirt if necessary. Always wash your hands after using the restroom.

USDA is committed to ongoing modernizing and improving of the Federal inspection systems for meat and poultry, while the Food and Drug Administration (FDA) has responsibility for seafood inspections and safety. However, since foods are not sterile and need to be handled with care at all links in the food safety chain, your help is needed to assure food safety.

Federal Government Food Safety Hotlines

Questions about food safety and sanitation?

For inquiries about meat and poultry:
Call **USDA's Meat and Poultry Hotline** at
1-888-MPHotline (1-888-674-6854)
TTY: 1-800-256-7072

10 a.m. to 4 p.m. weekdays, Eastern Time
(Recorded food safety messages are available 24 hours a day)
website: www.fsis.usda.gov/mph/
Questions via e-mail: mp hotline.fsis@usda.gov

For inquiries about **seafood**, food safety, nutrition, labeling, additives, and biotechnology:

Call: Food and Drug Administration,
Center for Food Safety and Applied Nutrition

Outreach Information Center

Toll free number
1-888- SAFEFOOD (1-888-723-3366)
10 a.m. to 4 p.m. weekdays, Eastern Time
(Recorded informational messages are available 24 hours a day)
website: www.cfsan.fda.gov

Other sources of food safety information:

www.FoodSafety.gov
www.FightBac.org

Microwave Cooking

Some summer food service sponsors are making use of microwave cooking in kitchens. Microwave ovens heat the surfaces of food quickly, but leave food with "cold spots" that could support the growth of harmful bacteria. It is recommended that large cuts of meat **not** be prepared in the microwave.

It is important to become familiar with the manufacturer's information so that food cooks thoroughly and evenly in the microwave. In addition, follow these microwave safety tips:

- Cover food to hold in moisture, cook evenly, and keep microwave clean.
- If microwave does not have a turntable, stir foods several times during heating.
- Allow foods cooked in the microwave to stand covered for 2 minutes after heating.
- Check the internal temperature of food in several places to verify that food has reached a safe internal temperature: red meat: 160 °F; whole poultry 180 °F; fish should flake with a fork; leftovers 165 °F.

Storage Recommendations for Refrigerated Foods

REGRIGERATED FOODS

Food Item	Refrigerator	Comments	Food Item	Refrigerator	Comments
Meat			Dairy Products		
Roasts, steaks, chops	3 to 5 days	Wrap loosely	Fluid milk	5 to 7 days after date on carton	Keep covered and in original container
Ground and stewing	1 to 2 days	Wrap loosely	Butter	2 weeks	Waxed cartons
Variety meats	1 to 2 days	Wrap loosely	Hard cheese (cheddar, parmesan, romano)	6 months	Cover tightly to preserve moisture
Whole ham	7 days	May wrap tightly	Cottage cheese	3 days	Cover tightly
Half ham	3 to 5 days	May wrap tightly	Other soft cheeses	7 days	Cover tightly
Ham slices	3 to 5 days	May wrap tightly	Evaporated milk	1 year unopened	Refrigerate after opening
Canned ham	1 year	Keep in can	Dry milk (nonfat)	1 year unopened	Refrigerate after opening
Frankfurters	1 week	Original wrapping	Reconstituted dry milk	1 week	Treat as fluid milk
Bacon	1 week	May wrap tightly	Yogurt	7-14 days	
Luncheon meats	3 to 5 days	Wrap tightly when opened	Sour Cream	7-21 days	
Leftover Cooked Meats	1 to 2 days	Wrap or cover tightly	Fruit		
Gravy, Broth	1 to 2 days	Highly perishable	Apples	2 weeks	Room temperature till ripe
Poultry			Avocados	3 to 5 days	Room temperature till ripe
Whole chicken, turkey	1 to 2 days	Wrap loosely	Bananas	3 to 5 days	Room temperature till ripe
Giblets	1 to 2 days	Wrap separate from bird	Berries, cherries	2 to 5 days refrigerating	Do not wash before
Stuffing	1 to 2 days	Covered container separate from bird	Citrus	1 month	Original container
Chicken, turkey parts	1 to 2 days	Cover	Cranberries	1 week	
Cut-up cooked poultry	3 to 4 days	Cover	Grapes	3 to 5 days	Room temperature till ripe
Fish			Pears	3 to 5 days	Room temperature till ripe
Fatty fish	1 to 2 days	Wrap loosely	Pineapples	3 to 5 days	Refrigerate (lightly covered) after cutting
Fish—not iced	1 to 2 days	Wrap loosely	Plums	1 week	Do not wash before refrigerating
Fish—iced	3 days	Don't bruise with ice	Vegetables		
Eggs			Sweet potatoes, mature onions, squashes, rutabagas	1 to 2 weeks at room temperature 3 months at 60°F	Ventilated containers for onions
Eggs in shell	3 to 5 weeks	Do no wash. Remove from container	Potatoes	30 days	Ventilated containers
Leftover yolks/whites	2 to 4 days	Cover yolks with water	All other vegetables	5 days maximum for most; 2 weeks for cabbage, root vegetables	Unwashed for storage
Dried eggs	1 year	Cover tightly			
Reconstituted eggs	1 week	Same treatment as eggs in shell			
Hard cooked	1 week				
Cooked Dishes with Eggs, Meat, Milk, Fish, Poultry	Serve day prepared	Highly perishable			

Storage Recommendations for Frozen Foods

FROZEN FOODS

Food Item	Freezer	Food Item	Freezer
Meat	8 to 12 months	Fruit Juice	8 to 12 months
Beef, ground and stewing	3 to 4 months	Vegetables	8 months
Pork, ground	1 to 3 months	French-Fried Potatoes	2 to 6 months
Ham, frankfurters, bacon	2 weeks	Precooked	2 to 6 months
luncheon meats	(freezing not recommended)	Combination Dishes	
Leftover cooked meats	2 to 3 months	Baked Goods	
Gravy, broth	2 to 3 months	Cakes, prebaked	4 to 9 months
Sandwiches with meat	1 to 2 months	Cookies	6 to 12 months
filling		Yeast breads and rolls,	3 to 9 months
Poultry		prebaked	
Whole chicken, turkey,	12 months	Yeast breads and rolls,	1 to 1½ months
duck, goose		dough	
Giblets	3 months	Ice Cream	3 months
Cut-up cooked poultry	4 months		
Fish	6 months		

Keep These Food Safety Rules in Mind

- Keep hot foods HOT! (Keep food at 140 °F or above). Maintain proper holding temperatures, 140 °F or above.
- Keep cold foods COLD! (Refrigerate or chill food at 40 °F or below)
- Keep frozen food in a freezer at 0 °F or lower.
- Be sure thermometers are available and use them properly.
- Cook potentially hazardous foods to proper internal temperatures. Use a meat thermometer.
- Do not partially cook food one day and complete cooking the next day.
- Prepare sandwiches and salads with a minimum amount of handling. Follow local health regulations for using disposable plastic gloves.
- Promptly refrigerate or freeze leftovers. Divide large quantities into smaller containers or use shallow pans, and cover loosely for quick cooling. Once cooled, tightly cover and date leftovers.
- Reheat leftovers to at least 165 °F.
- Thaw poultry and meat in a refrigerator and not on counters. Refreeze only if ice crystals are still present.
- Do not let perishable food remain at room temperature between 40 °F and 140 °F any longer than possible.
- Keep meals and milk not being served at the time in the refrigerator or cooler at a temperature of 40 °F or below. Hot meals should be in a warming unit or insulated box at a holding temperature of 140 °F or more.
- Empty garbage cans daily. They should be kept tightly covered and thoroughly cleaned. Use plastic or paper liners.
- Remember that you cannot determine food safety by sight, taste, odor, or smell. If there is *any* doubt, throw the food away.
- Follow instructions exactly on how to use and clean kitchen equipment.
- Train food service employees on the safe use of all types of equipment and on personal hygiene.
- Keep a fire extinguisher and first-aid kit handy and instruct all personnel in their use.

Questions and Answers

1. I have to hire staff to operate the kitchen. What are some of the things I have to take into consideration?

Before you hire your meal service staff, you will have to first determine the number and the type of meals you will be serving. From there, you can determine how many staff you need to hire. Take into consideration their experience, and don't be afraid to utilize qualified volunteers in your operations. Also make sure they meet health standards outlined by your local and State authorities. Once you have selected your food service employees, ensure they understand, as a minimum, the goals of the SFSP, the meal pattern requirements, the importance of serving meals that meet the Dietary Guidelines and food safety and sanitation rules. You can contact your State agency for training resources.

2. I want to get the most for my food dollar. What should I do to help accomplish that aim?

Careful planning and buying are the keys to getting the most from your food dollar. Getting good quality food in the proper amounts at the best possible price is what it's all about! Buy food from suppliers who provide the best quality product and offer food that will help you meet the Dietary Guidelines, and at a reasonable price. When deciding what to buy read the labels carefully, buy federally inspected meats and poultry, check packaging and expiration dates, purchase only pasteurized milk and milk products and make sure perishable foods have been kept under refrigeration and that frozen food has been kept frozen. Review your cycle menu to see what recipes you'll use and the items needed. Check your inventory and be sure to follow a grocery list when you make your purchases. USDA's *Food Buying Guide for Child Nutrition Programs* will help you determine the quantities of food to purchase.

3. Do you have any tips on how to prepare quality meals for participants?

How you prepare your food plays a big part in serving nutritious and acceptable meals. When using standardized recipes, follow them exactly. When preparing fresh fruits and vegetables, wash them in water and carefully trim away any bruised or inedible spots. Steam or cook in small batches to retain most of their vitamins and minerals. Trim visible fat from meats when preparing them for cooking. Don't overcook cereals and grains, and don't over-season foods - remember participants' tastes and preferences, especially those of children.

4. How can I determine how much food to give to a participant?

By using scoops, ladles, and serving spoons of standard sizes, you can provide dependable measures of food items which will ensure the participants are getting the proper amount of food as outlined in the SFSP meal pattern requirements. Scoops can be used for portioning such foods as drop cookies, muffins, meat patties and also some ready to eat vegetables and salads. Use ladles to serve soups, stews, sauces and other similar products. Serving spoons can be used instead of a scoop. However, you must measure or weigh the quantity of food from the various sizes of spoons you use in order to determine the serving size you need. Further, train your kitchen staff to recognize and use the proper serving size spoons, scoops and ladles and provide a sample plate containing the proper amounts of foods for that day's meal service.

5. How should I store the foods I purchase?

Proper storage will keep the foods you buy safe, fresh, and appetizing. Check the condition of all foods once they reach your receiving area, and store them in the proper environment. Dry foods must be stored in a dry area, off of the floor, and refrigerated/frozen foods must be stored in refrigerators or freezers under the proper temperatures. It's important to keep all food storage areas orderly, clean, sanitary and free from rodent or insect infestation, and to rotate your foods on a "first-in, first out" basis. Keeping food inventory records will also help you in knowing what foods you have on hand, what you'll need to buy, as well as tracking food costs.

6. I want to be sure I maintain a clean kitchen. How can I accomplish this?

Proper sanitation will go a long way in preventing or reducing the risk of food borne illnesses. Washing hands thoroughly with warm, soapy water before handling foods or utensils is absolutely necessary. You should wash and sanitize all dishes, utensils, equipment and work surfaces. Wearing clean uniforms and hairnets, using disposable gloves, and adhering to local and state health codes are important things to keep in mind. Be sure to immediately clean up any spilled foods, and empty garbage cans daily. Make sure those cans have covers and are lined with plastic or paper.

7. Do I need to be concerned with food safety?

Yes! It is extremely important for you to take every precaution against food borne illness - a sickness spread by bacteria growing in food that has not been properly handled. Food stored, cooked, held, or handled at improper temperatures allow bacteria to grow to dangerous levels. The best way to combat food borne illness is to make sure foods are stored, handled, and cooked at the right temperature - making sure cold foods are kept cold (at or below 40 °F), and that hot foods are kept hot (at 140 °F or above). Never let perishable foods remain in the danger zone temperature (40 °F to 140 °F) any longer than necessary. Ensure that all food preparation surfaces and utensils are clean at all times, and use food thermometers to check foods when cooking, handling, and serving food. USDA has a Meat and Poultry Hotline (1-888-674-6854), which you can call to get more information on food safety. The Food and Drug Administration also has two hotlines with regard to food safety: 1-888-SAFEFOOD (1-888-723-3366), handled by the Center for Food Safety and Applied Nutrition; and the Seafood Hotline at 1-800-332-4010.

The Food Guide Pyramid

The Food Guide Pyramid was developed by USDA and DHHS as a visual representation of the concepts of moderation and proportionality, as well as variety.

Using the pyramid helps respond to meeting the *Dietary Guidelines for Americans*.

The meal pattern requirements for SFSP ensure that a variety of foods are received and are in keeping with the variety recommended in the *Food Guide Pyramid*.

Food Guide Pyramid for Young Children

SFSP Meal Pattern – Points to Remember

Keep in mind the following points when you plan menus to meet meal pattern requirements and the Dietary Guidelines recommendations.

Meat and Meat Alternates

- For menu variety, serve:
 - Meat and cheese in combination (1 ounce of meat and 1 ounce of cheese – 2 ounces total).
 - Dried beans or peas (Remember: do not count for vegetable **and** meat alternate in the same meal).
 - Peanut butter or other nut butters, such as almond butter. (It is not recommended to use only peanut butter to meet the meat/meat alternate requirement for lunch or supper since a sandwich made with 4 Tbsp. of peanut butter is usually too thick and difficult for children to consume.)
- Nuts and seeds may fulfill:
 - full requirement for the snack, but
 - no more than one-half of the requirement for lunch or supper.
- Yogurt may be served as a meat/meat alternate component. For breakfast and snack you may serve 4 oz. (weight) or ½ cup (volume) of plain, sweetened or flavored yogurt to equal 1 ounce of the meat/meat alternate component. For lunch and supper you may serve 8 oz. (weight) or 1 cup (volume) yogurt to equal 2 ounces of the meat/meat alternate component. Do not use homemade yogurt, as it may present food safety dangers. Frozen yogurt or other yogurt-flavored snack products are not considered yogurt and therefore do not meet the requirements.

Fruits and Vegetables

- Use only 100-percent-strength juice for breakfast. Juice drinks with at least 50-percent-strength juice may be used for snack and lunch, but children must be served double the volume of these drinks to meet the requirement.
- Fruit-flavored drinks, ades, or punches contain less than 50 percent-strength juice. These types of beverages may be served as an "other food" but are not credited toward meeting the requirement.
- Juice may not be served as part of the snack when milk is the only other component.
- Juice or syrup from canned fruit does not count as fruit juice.

- Use a different combination of two or more servings for lunch. Include various forms such as raw or cooked, fresh, frozen, canned in juices, or dried.
- Do not serve two forms of the same fruit or vegetable in the same meal. Example: An orange and orange juice, or an apple and applesauce are combinations that should not be used. **Serve a variety of vegetables and fruits to ensure a nutritionally well-balanced meal.**
- Small amounts (less than 1/8 cup) of onions, pickles, relish, catsup, jams or jellies, or other condiments may be added for flavor or garnish as "other foods".

Grains and Breads

- Use grains/breads that are whole-grain or enriched or made from whole-grain or enriched flour or meal or, if it is a cereal it must be whole-grain, enriched, or fortified. Read labels on commercial products to guide you. Bran and germ are credited the same as whole-grain or enriched flour and/or meal.
- Use macaroni or noodle products (cooked) made with enriched or whole-grain flour. Program regulations allow enriched macaroni products that have been fortified with protein to be counted to meet either a grain/bread or meat/meat alternate requirement but not as both in the same meal.
- Piecrust used as part of the main dish (i.e., for meat turnovers or meat pies) is allowed as a bread item.
- When made from whole-grain or enriched meal or flour, sweet foods such as toaster pastries, coffee cake, doughnuts, sweet rolls, cookies, or cakes can be used to meet the bread requirement as specified in the Grains and Breads Chart below. Grain-based sweet snack foods should not be served as part of a snack more than twice a week.
Note: Formulated grain-fruit products are allowed only for school districts participating in the SFSP under the National School Breakfast/Lunch Program.
- Non-sweet snack products such as hard pretzels, hard bread sticks, and chips made from enriched or whole-grain meal or flour can be used to meet the grain/bread requirement.

Grains and Breads

GROUP A	MINIMUM SERVING SIZE FOR GROUP A
• Bread type coating • Bread sticks (hard) • Chow mein noodles • Crackers (saltines and snack crackers) • Croutons • Pretzels (hard) • Stuffing (dry) Note: weights apply to bread in stuffing	1 serving = 20 gm or 0.7 oz $\frac{3}{4}$ serving = 15 gm or 0.5 oz $\frac{1}{2}$ serving = 10 gm or 0.4 oz $\frac{1}{4}$ serving = 5 gm or 0.2 oz
GROUP B	MINIMUM SERVING SIZE FOR GROUP B
• Bagels • Batter type coating • Biscuits • Breads (white, wheat, whole wheat, French, Italian) • Buns (hamburger and hotdog) • Crackers (graham crackers - all shapes, animal crackers) • Egg roll skins • English muffins • Pita bread (white, wheat, whole wheat) • Pizza crust • Pretzels (soft) • Rolls (white, wheat, whole wheat, potato) • Tortillas (wheat or corn) • Tortilla chips (wheat or corn) • Taco shells	1 serving = 25 gm or 0.9 oz $\frac{3}{4}$ serving = 19 gm or 0.7 oz $\frac{1}{2}$ serving = 13 gm or 0.5 oz $\frac{1}{4}$ serving = 6 gm or 0.2 oz
GROUP C ¹	MINIMUM SERVING SIZE FOR GROUP C
• Cookies ² (plain) • Cornbread • Corn muffins • Croissants • Pancakes • Pie crust (dessert pies ², fruit turnovers ³, and meat/meat alternate pies) • Waffles	1 serving = 31 gm or 1.1 oz $\frac{3}{4}$ serving = 23 gm or 0.8 oz $\frac{1}{2}$ serving = 16 gm or 0.6 oz $\frac{1}{4}$ serving = 8 gm or 0.3 oz

¹ Some of the following foods, or their accompaniments may contain more sugar, salt, and/or fat than others. This should be a consideration when deciding how often to serve them.

² Allowed only for desserts under the enhanced food-based menu planning alternative specified in §210.10 and supplements (snacks) served under the NSLP, SFSP, and CACFP.

³ Allowed for desserts under the enhanced food-based menu planning alternative specified in §210.10 and supplements (snacks) served under the NSLP, SFSP, and CACFP, and for breakfasts served under the SBP, SFSP and CACFP.

GROUP D	MINIMUM SERVING SIZE FOR GROUP D
• Doughnuts ³ (cake and yeast raised, unfrosted) • Granola bars ³ (plain) • Muffins (all, except corn) • Sweet roll ³ (unfrosted) • Toaster pastry ³ (unfrosted)	1 serving = 50 gm or 1.8 oz $\frac{3}{4}$ serving = 38 gm or 1.3 oz $\frac{1}{2}$ serving = 25 gm or 0.9 oz $\frac{1}{4}$ serving = 13 gm or 0.5 oz
GROUP E	MINIMUM SERVING SIZE FOR GROUP E
• Cookies ² (with nuts, raisins, chocolate pieces and/or fruit purees) • Doughnuts ³ (cake and yeast raised, frosted or glazed) • French toast • Grain fruit bars ³ • Granola bars ³ (with nuts, raisins, chocolate pieces and/or fruit) • Sweet rolls ³ (frosted) • Toaster pastry ³ (frosted)	1 serving = 63 gm or 2.2 oz $\frac{3}{4}$ serving = 47 gm or 1.7 oz $\frac{1}{2}$ serving = 31 gm or 1.1 oz $\frac{1}{4}$ serving = 16 gm or 0.6 oz
GROUP F	MINIMUM SERVING SIZE FOR GROUP F
• Cake ² (plain, unfrosted) • Coffee cake ³	1 serving = 75 gm or 2.7 oz $\frac{3}{4}$ serving = 56 gm or 2 oz $\frac{1}{2}$ serving = 38 gm or 1.3 oz $\frac{1}{4}$ serving = 19 gm or 0.7 oz
GROUP G	MINIMUM SERVING SIZE FOR GROUP G
• Brownies ² (plain) • Cake ² (all varieties, frosted)	1 serving = 115 gm or 4 oz $\frac{3}{4}$ serving = 86 gm or 3 oz $\frac{1}{2}$ serving = 58 gm or 2 oz $\frac{1}{4}$ serving = 29 gm or 1 oz
GROUP H	MINIMUM SERVING SIZE FOR GROUP H
• Barley • Breakfast cereals (cooked) ⁴ • Bulgur or cracked wheat • Macaroni (all shapes) • Noodles (all varieties) • Pasta (all shapes) • Ravioli (noodle only) • Rice (enriched white or brown)	1 serving = $\frac{1}{2}$ cup cooked (or 25 gm dry)
GROUP I	MINIMUM SERVING SIZE FOR GROUP I
• Ready to eat breakfast cereal (cold dry) ⁴	1 serving = $\frac{3}{4}$ cup or 1 oz, whichever is less

⁴ Refer to program regulations for the appropriate serving size for supplements served to children aged 1 through 5 in the NSLP; breakfasts served under the SBP; and meals served to children ages 1 through 5 and adult participants in the CACFP. Breakfast cereals are traditionally served as a breakfast menu item but may be served in meals other than breakfast.

How to Read Food Labels

The new nutrition labels called "Nutrition Facts" are appearing on almost all food products. You may not see them on institutional packs. Foods packaged in large size containers for food service are currently exempt. Inserts or fact sheet information may be provided.

The nutrition label gives standard serving sizes for adults. Be aware that the amounts would have to be adjusted for child size portions, according to meal pattern minimum quantity requirements. Therefore the number of servings and the number of calories per serving along with the number of calories per fat would be similarly adjusted.

Nutrient information on the new labels include: total calories, calories from fat, total fat, saturated fat, cholesterol, sodium, total carbohydrate, including dietary fiber and sugars, and protein based on an established serving size. "Daily Values" in percents are based on an adult's daily intake of 2,000 calories. Keep in mind that the average energy allowance for children 6 through 12 years old is about 2,600 calories per day.

Included on the label are percentages of Vitamins A and C, calcium and iron. Again these are based on daily requirements for adults, not children.

The Food Label at a Glance

The new food label will carry an up-to-date, easier to use nutrition information guide, to be required on almost all packaged foods. The guide will serve as a key to help in planning a healthy diet. *

Serving sizes are more consistent across product lines, are stated in both household and metric measures, and reflect the amounts people actually eat.

The list of nutrients covers those most important to the health of today's consumers, most of whom need to worry about getting too much of certain nutrients (fat, for example), rather than too few vitamins or minerals, as in the past.

The label of larger packages tell the number of calories per gram of fat, carbohydrate, and protein.

Nutrition Facts			
Serving Size 1/2 cup (114g)			
Servings Per Container 4			
Amount Per Serving			
Calories 90		Calories from Fat 30	
		% Daily Value*	
Total Fat	3g	5 %	
Saturated Fat	0g	0%	
Cholesterol	0mg	0%	
Sodium	300mg	13%	
Total Carbohydrates	13g	4%	
Dietary Fiber	3g	12%	
Sugars	3g		
Protein	3g		
Vitamin A	80%	Vitamin C	60 %
Calcium	4%	Iron	10%
*Percent Daily Values are based on a 2,000 calorie diet. Your daily values may be higher or lower depending on your calorie needs.			
	Calories:	2,000	2,500
Total fat	Less than	65g	80g
Sat Fat	Less than	20g	25g
Cholesterol	Less than	300mg	300mg
Sodium	Less than	2,400mg	2,400mg
Total carbohydrate		300g	375g
Fiber		25g	30g
Calories per gram:			
Fat	9	Carbohydrate	4
		Protein	4

Calories from fat are shown on the label to help consumers meet dietary guidelines that recommend people get no more than 30 percent of the calories in their overall diet from fat.

% Daily Value shows how a food fits into the overall daily diet.

Daily values may be maximums, as with fat (65 grams or less); others are minimums, as with carbohydrate (300 grams or more). The daily values for a 2,000 and 2,500 calorie diet must be listed on the label of larger packages.

* This label is only a sample. Exact specifications are in the final rules. Source: Food and Drug Administration, 1994

Sources of Nutrients

Plan menus to include good sources of nutrients. The following fruits and vegetables are good sources of Vitamins A and C.

Foods that Contain Vitamin A

Fruits

Apricots:		
- Canned, juice pack	2 halves	Good
- Dried, cooked, unsweetened	1/4 cup	Better
- Dried, uncooked	5 halves	Good
Cantaloupe	1/4 cup, diced	Better
Cherries, red sour, fresh	1/4 cup pitted	Good
Mandarin orange sections	1/4 cup	Good
Mango, raw	1/4 medium	Best
Melon balls (cantaloupe and honeydew)	1/4 cup	Good
Nectarine	1/2 medium	Good
Papaya	1/4 cup	Good
Plums, canned, juice pack	1/4 cup	Good
Prunes, dried, cooked	1/4 cup	Good
Watermelon	1 cup	Good

Vegetables

Beet greens, cooked	1/4 cup	Best
Bok choy, cooked	1/4 cup	Best
Broccoli, cooked	1/4 cup	Good
Carrots, raw or cooked	1/4 cup	Best
Chicory greens, raw	1/4 cup	Good
Collards, cooked	1/4 cup	Good
Dandelion greens, cooked	1/4 cup	Best
Escarole, cooked	1/4 cup	Good
Kale, cooked	1/4 cup	Best
Mustard greens, cooked	1/4 cup	Good
Peas and carrots, cooked	1/4 cup	Best
Peppers, sweet red, raw	1/2 small	Best
Plantain, cooked	1/2 medium	Good
Pumpkin, cooked	1/4 cup	Good
Romaine lettuce	1/4 cup	Good
Spinach, cooked	1/4 cup	Best
Squash, winter (acorn, butternut, etc.)	1/4 cup	Best
Sweet potato	1/2 medium	Best
Swiss chard, cooked	1/4 cup	Good
Tomato (juice, paste, or puree)	1/4 cup	Good
Turnip greens, cooked	1/4 cup	Best

Milk

Milk, lowfat or skim	1/2 cup	Good
----------------------	---------	------

Foods that Contain Vitamin C

Food	Serving Size	Source of Vitamin C
<u>Meat/Meat Alternates</u>		
Liver (beef, pork), braised	1 1/2 oz	Better
Liver (chicken)	1/4 cup	Good
Clams, steamed or canned	1 1/2 oz	Good
<u>Fruits</u>		
Apple	1/2 medium	Good
Banana	1/2 medium	Good
Blackberries, raw	1/4 cup	Better
Blueberries, raw	1/4 cup	Good
Cantaloupe	1/4 cup	Best
Grapefruit	1/4 medium	Best
Grapefruit juice	1/2 cup	Best
Grapefruit-orange juice	1/2 cup	Best
Grapefruit-orange sections	1/4 cup	Best
Guava, raw	1/4 cup	Best
Honeydew melon	1/2 cup	Better
Kiwi	1/2 medium	Best
Kumquat	1 fruit	Good
Mandarin orange sections	1/4 cup	Best
Mango, raw	1/4 medium	Best
Nectarine	1/2 medium	Good
Orange	1/2 medium	Best
Orange juice	3/8 cup	Best
Papaya	1/4 cup	Better
Peach		
Frozen	1/4 cup	Best
Fresh, raw	1/2 medium	Good
Pear	1/2 medium	Good
Pineapple, fresh or canned	1/4 cup	Good
Pineapple juice, canned	3/8 cup	Better
Pineapple-grapefruit juice	3/8 cup	Best
Pineapple-orange juice	3/8 cup	Best
Plum, raw	1/2 medium	Good
Raspberries	1/4 cup	Better
Strawberries	1/4 cup	Best
Tangelo	1/2 medium	Best
Tangerine	1/2 medium	Best
Tangerine juice	1/2 cup	Best
Watermelon	1/2 cup	Better
<u>Vegetables</u>		
Asparagus, cooked	1/4 cup	Best
Beans, green or yellow, cooked	1/4 cup	Good
Beans, lima, cooked	1/4 cup	Good
Bok choy, cooked	1/4 cup	Better
Broccoli, raw or cooked	1/4 cup	Best
Brussels sprouts, cooked	1/4 cup	Best

Foods that Contain Vitamin C (Continued)

Cabbage, green, raw or cooked	1/4 cup	Better
Cabbage, red, raw or cooked	1/4 cup	Best
Cauliflower, raw or cooked	1/4 cup	Best
Chard, cooked	1/4 cup	Good
Chili peppers, cooked	1/4 cup	Best
Chicory, raw	1/2 cup	Good
Chinese cabbage, cooked	1/4 cup	Better
Collards, cooked	1/4 cup	Good
Dandelion greens, raw	1/4 cup	Good
Escarole, raw	1/2 cup	Good
Kale, cooked	1/4 cup	Best
Kohlrabi, cooked	1/4 cup	Best
Mustard greens, cooked	1/4 cup	Better
Okra, cooked	1/4 cup	Good
Onion, medium, raw	1/2 medium	Good
Parsnips, cooked	1/4 cup	Good
Peas, cooked	1/4 cup	Good
Pepper (green and red/raw/cooked)	1/4 cup	Best
Plantain, green or ripe, boiled	1/2 medium	Best
Poke greens, cooked	1/4 cup	Best
Potato, baked or boiled	1/2 medium	Better
Radishes, raw	3 large	Good
Romaine lettuce, raw	1/2 cup	Good
Rutabaga, cooked	1/4 cup	Better
Snow peas, raw or cooked	1/4 cup	Best
Spinach, cooked	1/4 cup	Good
Squash, summer or winter, raw/cooked	1/4 cup	Good
Sweet potato, baked, boiled, canned	1/2 medium	Best
Tomato	1/2 medium	Better
Tomato juice	3/8 cup	Best
Tomato-vegetable juice	3/8 cup	Best
Turnip greens with turnips, cooked	1/4 cup	Good
Turnips, cooked	1/4 cup	Good

Young children need iron in their diet. The following are sources from a variety of foods.

Foods that Contain Iron

Food	Serving Size	% RDA
<u>Meat/Meat Alternates</u>		
Beef brisket	1 1/2 oz	Good
Beef, ground, extra lean, broiled	1 1/2 oz	Good
Beef liver	1 1/2 oz	Better
Beef, pot roast, braised	1 1/2 oz	Good
Beef short ribs, braised	1 1/2 oz	Good
Beef, rib roast, roasted	1 1/2 oz	Good
Beef, steak, broiled	1 1/2 oz	Good
Beef, stew meat, simmered	1 1/2 oz	Good
Calf liver	1 1/2 oz	Good
Chicken or turkey liver	1 1/2 oz	Better

Liverwurst	1 oz	Good
Pork liver	1 1/2 oz	Best
Tongue, braised	1 1/2 oz	Good
Turkey, dark meat, roasted, no skin	1 1/2 oz	Good
<u>Meat/Meat Alternates – Eggs</u>		
Large egg	1	Good
<u>Meat/Meat Alternates – Fish/Seafood</u>		
Clams, steamed or canned	1 1/2 oz	Best
Mackerel, canned	1 1/2 oz	Good
Oysters, steamed or canned	1 1/2 oz	Better
Shrimp, broiled or canned	1 1/2 oz	Good
Trout, baked or broiled	1 1/2 oz	Good
<u>Meat/Meat Alternates – Dry Beans, Peas, and Lentils</u>		
Black-eyed peas (cowpeas)	1/4 cup	Good
Chickpeas (garbanzo beans)	1/4 cup	Good
Kidney beans	1/4 cup	Good
Lentils	1/4 cup	Good
Pinto beans	1/4 cup	Good
Soybeans	1/4 cup	Better
White beans	1/4 cup	Good
<u>Meat/Meat Alternates – Nuts and Seeds</u>		
Pine nuts (pignolias)	1 Tbsp	Good
Pumpkin or squash seeds, roasted	1 Tbsp	Better
<u>Fruits</u>		
Prunes, dry, cooked	1/4 cup	Good
Raisins, seedless	1/4 cup	Good
<u>Vegetables</u>		
Beans, Lima, cooked	1/4 cup	Good
Beans, black, cooked	1/4 cup	Good
Black-eyed peas, cooked	1/4 cup	Good
Chard, cooked	1/4 cup	Good
Spinach, cooked	1/4 cup	Good
<u>Grains/Breads</u>		
Bagel, plain, pumpernickel, or whole-wheat	1/2 medium	Good
Cereals, ready-to-eat, enriched	1/2 oz	Better
Muffin, bran	1/2 medium	Good
Noodles, cooked	1/2 cup	Good
Oatmeal, instant, enriched	1/3 cup	Better
Pita bread, plain or whole-wheat	1/2 medium	Good
Pretzel, soft	1/2	Good
Rice, white, regular, cooked	1/3 cup	Good

Foods that Contain Calcium

Food	Serving Size	% RDA
<u>Meat Alternates – Fish</u>		
Mackerel, canned	1 1/2 oz	Good
Salmon, canned with bones	1 1/2 oz	Good
Sardines, canned with bones	1 each	Good
<u>Meat Alternates – Cheese</u>		
Cottage cheese, low-fat	1/2 cup	Good
Natural cheese: blue, brick, Camembert, feta, gouda, Monterey jack, mozzarella, muenster, and provolone	1/2 oz	Good
Natural cheese: Swiss, Parmesan, and Romano	1/2 oz	Better
Processed cheese: cheddar, Swiss, and ricotta cheese	3/4 oz	Better
	1/4 cup	Better
Yogurt-flavored or with fruit, or plain	4 oz	Better
<u>Meat Alternates – Nuts</u>		
Almonds, unblanched, dry-roasted	1 oz	Good
<u>Vegetables</u>		
Spinach, cooked	1/4 cup	Good
<u>Grains/Breads</u>		
Pancakes, plain, fruit, buckwheat, or whole-wheat	4" round	Better
Waffles, bran, cornmeal, and/or fruit	4" square	Good
Waffles, plain	4" square	Better
<u>Milk</u>		
Buttermilk	1/2 cup	Better
Chocolate milk	1/2 cup	Better
Low-fat or nonfat milk	1/2 cup	Better
Whole milk	1/2 cup	Better

Serving Sizes and Yields for Vegetables

Vegetable	Size and Count	Serving Size and Yield
Carrot Sticks	Specify U.S. #1 carrots with 1 1/8 in. medium diameter - about 7 1/2 in. length, 6 per pound, 50 pound mesh bag.	1 stick is 4 in. long and 1/2 in. wide. 6 sticks = 1/4 cup
Cauliflower	Specify in cartons of 18-24 pounds, or wire-bound crates of 45-50 pounds.	1 medium head = about 6 cups florets
Celery Sticks	Specify 2, 2 1/2, or 3 dozen per crate. Crates weigh 60-70 pounds net.	1 stick is 3 in. long and 3/4 in. wide. 4 sticks = 1/4 cup
Cucumbers	Specify 2 in. minimum diameter. This information will be stamped on the basket. Cucumbers will vary from 2 in. to 2 1/2 in. in diameter and are about 7 1/2 in. long.	
Slices	1/8 in. thick slices	4 slices = 1/4 cup
Sticks	Cut into thirds crosswise and each third into fourths lengthwise for sticks.	1 cucumber = 12 sticks 2 sticks = 1/4 cup
Lettuce, Head (Iceberg)	Specify 2 dozen heads, weight of 40-48 pounds.	1 leaf = 1/4 cup
Lettuce, Leaf	Specify 2 dozen heads, weight 18 pounds.	1 large leaf = 1/4 cup
Olives, Ripe	Large	8 olives = 1/4 cup
Pickles, Dill	Specify large size, 4 to 4 3/4 in. long, 22 to 39 count per gallon.	1/3 pickle = 1/4 cup
Pickles, Sweet	Specify small size, 2 3/4 to 3 1/2 in. long, 52 to 99 count per gallon.	1 pickle = 1/4 cup
Radishes	Specify U.S. #1, 1/2 in. diameter minimum, without tops, small size, 45 radishes per pound	7 radishes = 1/4 cup
Tomato	Specify 5x6 size, extra large, 30 pound net per container. Tomato is 2 1/8 in. x 3 in. diameter; 2 1/4 tomatoes per pound.	1/4 tomato = 1/4 cup
Slices	Specify 6x7 size, medium slices, 1/4 in.	2 slices = 1/4 cup
Cherry	Specify standard size, (California or Arizona) or size 125 (Texas).	4 tomatoes = about 1/2 cup

Serving Sizes and Yields for Fruits

Fruit	Size and Count	Serving Size and Yield*
Apples	Specify size 185 to 195 or larger, approximately 2½ in. diameter, about 4 to 5 apples per pound.	1 apple = about ½ cup
Bananas	Purchase by fingers, institutional pack, 150 per case, three to four bananas per pound.	1 banana = ½ cup
Blueberries	Specify U.S. #1, sold in pints, fresh.	½ cup measure
Strawberries	Specify U.S. #1, minimum diameter ¾ in, sold in quarts and pints.	½ cup measure
Cantaloupe	Specify size 36, medium size, 5½ in. diameter, approximately 12/3 pounds per melon.	¼ melon = ½ cup
Grapes	Specify variety desired.	
With seeds		12 grapes = about ½ cup
Seedless		18 grapes = about ½ cup
Nectarines	Specify size 96 (2 to 2⅛ in. diameter) approximately 4 per pound.	1 nectarine = about ½ cup
Medium size	Specify size 70 and 72, approximately 3 per pound.	1 nectarine = about ½ cup
Oranges	Specify size 138 or 113 (California or Arizona) or size 125 (Florida or Texas).	1 orange = about ¾ cup
Peaches	Specify size 84 (2⅛ in. diameter - box may state 2 to 2¼ in. diameter); approximately 3½ to 4 peaches per pound.	1 peach = about ½ cup
Medium size	Specify size 60 to 64 (2½ in. diameter or larger); approximately 3 per pound.	1 peach = about ¾ cup
Pears	Specify size 150 (2¼ to 2⅜ in. diameter).	1 pear = about ½ cup
Medium size	Specify size 120; approximately 3 per pound.	1 pear = about ¾ cup

Serving Sizes and Yields for Fruits (continued)

Fruit	Size and Count	Serving Size and Yield*
Plums	Specify size 4x5, approximately 8 to 10 plums per pound.	2 plums = about ½ cup
Medium size	Specify size 4x4, 6 to 7 plums per pound.	2 plums = about ¾ cup
Raisins	Specify bulk purchase or individual packages.	Yield of Bulk: 1.3 to 1.5 ounces = ¼ cup 1 lb. = 12.6 ¼ cup Yield of Individual Package: 1 package (1½ ounce) = about ¼ cup
Tangerine	Specify size 176, fruit will average 2⅜ in. diameter; 4 tangerines per pound.	1 tangerine = about ½ cup
Watermelon	Specify average size, melons will average about 27 pounds.	Yield of melon = 1/64 wedge = about ½ cup

* Any serving size may be planned. For simplicity, this table of serving sizes and yields for vegetables and fruits provides ¼ cup servings of vegetables and ½ cup and/or ¾ cup servings of fruits.

Note: Where sizes are specified for fruits, they indicate numbers of fruit in the box. The larger the number, the smaller the fruit. Any fruit that is larger than that specified may be used.

Sample Position Description

Job Title: Cook		Effective Date:
Purpose of the Position: Prepares, seasons, and cooks soups, meats, vegetables, desserts, and other foods for consumption by children and some adults.		
Responsibilities:		% Time
1. Reads from menu and recipes to estimate food requirements and orders food from supplier or procures it from storage.		_____ %
2. Adjusts thermostat controls to regulate temperature of ovens, broilers, grills, roasters, and/or steam kettles.		_____ %
3. Measures and mixes ingredients according to recipe, using variety of kitchen utensils and equipment, such as blenders, mixers, grinders, slicers, and tenderizers, to prepare soups, salads, gravies, desserts, sauces, and casseroles.		_____ %
4. Bakes, roasts, broils, or steams meats, fish, vegetables, and other foods.		_____ %
5. Adds seasoning to food during mixing or cooking, according to standardized recipes.		_____ %
6. Observes and tests food being cooked by tasting, smelling, and piercing with fork to determine that it is cooked.		_____ %
7. Carves meat, portions food on serving plates, and adds gravies, sauces, and garnishes to food orders.		_____ %
8. May supervise other cooks and kitchen employees.		_____ %
9. May wash, peel, cut, and shred vegetables and fruits to prepare them for use.		_____ %
10. May bake bread, rolls, cakes, and pastry.		_____ %
11. Keeps accurate records of amounts used.		_____ %
12. Clean up as necessary.		_____ %

What is a Standardized Recipe?

A standardized recipe provides a list of measured ingredients and set of directions for preparation and service. These are necessary to prepare menu items of consistent quality, portion size, and nutritive value.

Tuna Melt

Ingredients	25 Servings		50 Servings		Directions
	Weight	Measure	Weight	Measure	
Whole large eggs	4 oz.	2	8 oz.	4	1. Place eggs in stock pot and cover with cold water. Bring to a boil and simmer for 10 minutes. Drain and rinse in cold water. Refrigerate. When chilled, peel and chop.
Dry mustard Lowfat mayonnaise	11 oz.	½ tsp. 1 cup	1 lb., 6 oz.	1 tsp. 2 cups	2. Combine dry mustard and mayonnaise in a bowl. Allow to set for 5 minutes.
Canned tuna, drained Onions, diced Fresh celery, diced Cheddar cheese, sliced English muffins	Half 66½ oz. can 1 oz. 8 oz. 13 oz.	1 qt. ¼ cup 1½ cup 12½	4 lb. 2 oz. 1 lb. 1 lb., 10 oz.	66½ oz. can ½ cup 3 cups 25	3. Combine chopped eggs, mustard mixture, tuna, onions, and celery in a large bowl. 4. Place English muffin halves on each half-sheet pan (18" x 13" x 2½"). Using a #20 scoop, place 1 portion of tuna mix on each muffin half. Place ½ ounce slice of cheese on top of each portion. Bake in a 350 °F conventional oven for 5 minutes or a 325 °F convection oven for 5 minutes until cheese is melted.

Serving: 3 oz. portion (includes muffin and cheese)

Yield: 25 servings: 3 lb. 4 oz. (tuna salad)
50 servings: 6 lb. 8 oz. (tuna salad)

Food Service Equipment Needs				
Equipment	Number of Children			
	1 - 50	51 - 100	101 - 200	201 - 300
Range with ventilating hood	1 range with oven; 30" domestic or 30" – 36" commercial (2 burners)	1 range with oven 30" – 36" commercial (4 burners)	1 range with oven 30" – 36" commercial (2 if over 150 children) (6 burners)	2 ranges with ovens 30" – 36" commercial or 1 range w/oven 60" or larger commercial (8 burners)
Refrigerator with shelves	single section domestic 18 cu. ft. or commercial reach-in 20-25 cu. ft.	double section commercial reach-in 40-50 cu. ft.	double section commercial reach-in 50-60 cu. ft. or 64 sq. ft. (8 ft. x 8 ft.) walk-in	triple section commercial reach-in 60-75 cu. ft. or 64 sq. ft. (8 ft. x 8 ft.) walk-in
Freezer	same as refrigerator	same as refrigerator	same as refrigerator	same as refrigerator
Work Tables (Allow 4 linear ft./worker). Use countertops as tables	1 table	2 tables	3 tables	4 tables
Sink with separate hand sink	1 sink - 3 compartments	1 sink - 3 compartments	1 sink - 3 compartments	1 sink - 3 compartments

If the site will serve over 100 children, the following equipment is recommended to supplement the minimum items listed above:

- Steam equipment (kettle, steamer)
- Hot food holding cabinet
- Convection oven
- Microwave oven
- Electric food slicer
- Mixer with attachments (vegetable slicer/shredder, meat and food chopper)

Daily Menu Production Worksheet

Date (1):		Sponsor:		Site:			
Meal Pattern	Menu (2)	Food Item Used (3)	Quantity Used (4)	Serving Size (5)	C P (6)	P A (7)	
Breakfast	Milk, Fluid Juice or Fruit or Vegetable Grain/Bread						
AM Snack	(Select 2) Milk, Fluid Juice or Fruit or Vegetable Grain/Bread Meat/Meat Alternate						
Lunch	Milk, Fluid Vegetable and/or Fruit (2 or more) Grain/Bread Meat/Meat Alternate						
PM Snack	(Select 2) Milk, Fluid Juice or Fruit or Vegetable Grain/Bread Meat/Meat Alternate						
Supper	Milk, Fluid Vegetable and/or Fruit (2 or more) Grain/Bread Meat/Meat Alternate						

Daily Menu Production Worksheet Instructions

(This prototype worksheet is not a Federal SFSP requirement. However, the State administering agency may require its use by sponsors preparing meals on-site or at a central kitchen.)

Item Number

1. Enter the calendar date showing month, day, and year.
2. Enter all menu items served on this date for the appropriate meal service.
3. Enter the name of each food used to meet meal or snack requirements. For a menu item like beef pot pie, the foods that meet the meal requirements at lunch or supper could be: beef cubes would meet the meat/meat alternate requirement; potatoes and carrots in the pie would meet part of the fruit/vegetable requirement; the pie crust would meet part or all of the grain/bread requirement.
4. Enter quantity of each ingredient or food item used to meet the meal requirements. Use weights, measures or number, (e.g., stew beef, 10 lbs; potatoes, 3 lbs; etc.).
5. Enter the portion or serving size of each menu item served (e.g., 5 oz. pie, 1/2 cup juice). Serving sizes can be shown in measures (such as cup measures, scoop size, ladle size), weight, or number (such as medium apple).
6. Enter number of child participants served at each meal/snack.
7. Enter the number of program adults served at each meal/snack (if applicable).

Food Inventory Record				
Name:				
Date:				
Beginning Inventory: \$				
Food Item (1)	Purchase Unit- Size & Description (case, bag, can, lb.) (2)	# of Units on Hand (3)	Unit Cost (4)	Total Cost (5)
Ending Inventory: \$				

Food Inventory Record Instructions

The value of the beginning inventory is determined by taking a physical count before the food service operation begins. The value of the beginning inventory thereafter is the same as the ending inventory for the previous month.

A complete physical inventory of all purchased foods, commodities, and supplies on hand must be taken at the end of the reporting period.

For ease in taking a physical count of foods in storage, arrange the items according to food groups in the storage area and arrange each group in alphabetical order, for example, canned fruits and fruit juices - apples, apricots, etc. Store food in cases, boxes, or other containers marked with the date received and cost per unit to facilitate the taking of inventories.

- Column 1. Enter the name of the food item, such as asparagus, green beans, or mayonnaise.
- Column 2. Enter the size pack, such as 6/#10 case, #50 bag, or #10 can. If different size containers of the same food item are on hand, use a separate line for each size and a separate line for each different unit cost of the same size pack.
- Column 3. Enter the number of units (of the size shown in column 2) found on hand from actual count.
- Column 4. Enter the unit cost for the size unit shown in column 2 (use the unit cost written on package or unit).
- Column 5. Obtain the total cost by multiplying the number of units (column 3) by the unit cost (column 4) and enter in column 5. Add column 5 (total cost) on all pages for the inventory at the end of the month. This total is the value of the ending inventory, and becomes the beginning inventory for the following month.

If You Suspect Foodborne Illness

Unfortunately, there may be a time when despite the best of intentions, a child may become ill due to bacteria in the food he or she eats. Here are some guidelines to follow if a child is suspected to be suffering from a foodborne illness.

- ⇒ Get the following information:
 - name(s) of the child(ren);
 - name of parent or guardian;
 - parent's or guardian's telephone number;
 - when the child ate last (the date and the time);
 - what the child ate last (include everything eaten);
 - whether anything tasted bad when it was eaten; and
 - what time the child began to feel ill, including the symptoms.
- ⇒ Include information on the food item(s) involved. Seal and keep all leftovers of the suspected food(s) and mark "DO NOT USE."
- ⇒ Call the local or State Health Department and inform them of the incident. They will direct you on what to do with the child and the suspected food(s).

Infant & Child Lifesaving Steps

StayWell

CHECK

- ▶ Check the scene for safety
- ▶ Check the victim for consciousness, breathing, pulse, and bleeding

CALL

- ▶ Dial 9-1-1 or local emergency number

CARE

- ▶ Care for conditions you find

INFANTS (birth to 1)

If conscious but choking...

Give 5 back blows ...

And 5 chest thrusts

Repeat blows and thrusts until object comes out

If not breathing...

Give 1 slow breath about every 3 seconds

If air won't go in...

1 Give 5 back blows ...

2 Look for and clear any object from mouth

3 Reattempt breaths

Repeat steps 1, 2, & 3 until breaths go in or help arrives

If not breathing and no pulse...

Give CPR—repeat sets of 5 compressions and 1 breath

CHILDREN (1-9)

If conscious but choking...

Give abdominal thrusts until object comes out

If not breathing...

Give 1 slow breath about every 3 seconds

If air won't go in...

1 Give up to 5 abdominal thrusts

2 Look for and clear any object from mouth

3 Reattempt breaths

If not breathing and no pulse...

Give CPR—repeat sets of 5 compressions and 1 breath

If bleeding...

Local Emergency Telephone Number: _____

Everyone should know what to do in an emergency. Call your local American Red Cross _____ for information on CPR and first aid classes.

Apply pressure, elevate, and bandage

HELP **You Can** PREVENT CHOKING

- Always watch or sit with children during meals and snacks. Young children, ages 2 to 3 especially, are at risk of choking on food and remain at risk until they can chew and swallow better by about age 4. Using the Food Guide Pyramid for Young Children, offer 2 to 3 year olds the same variety of foods as the rest of the children in your care, but prepared in forms that are easy for them to chew and swallow.

Watch children during meals and snacks to make sure they:

- Sit quietly.
- Eat slowly.
- Chew food well before swallowing.
- Eat small portions and take only one bite at a time.
- Finish swallowing before leaving the table.

Fix table foods so that they are easy to chew:

- Cut foods into small pieces or thin slices.
- Cut round foods, like hot dogs, lengthwise into thin strips.
- Remove all bones from fish, chicken, and meat.
- Cook food, such as carrots or celery, until slightly soft. Then cut into sticks.
- Remove seeds and pits from fruit.
- Spread peanut butter thinly.

The foods which are popular with young children are often the ones which have caused choking. Foods that may cause choking:

Firm, smooth, or slippery foods that slide down the throat before chewing, like:

- hot dog rounds
- hard candy
- large pieces of fruit
- granola
- peanuts
- whole grapes
- cherries with pits

Small, dry, or hard foods that are difficult to chew and easy to swallow whole, like:

- popcorn
- small pieces of raw carrot, celery or other raw hard vegetables
- nuts and seeds
- potato and corn chips
- pretzels

Sticky or tough foods that do not break apart easily and are hard to remove from the air-way like:

- spoonfuls or chunks of peanut butter or other nut/seed butters
- chunks of meat
- chewing gum
- marshmallows
- Raisins and other dried fruit

Information Resources

NFSMI (800) 321-3054

The **National Food Service Management Institute (NFSMI)**, located at the University of Mississippi, is committed to improving the operation and quality of all Child Nutrition Programs, including children served in SFSP. This is accomplished through staff development programs, training experiences, educational materials, and a national satellite network. The Institute is funded through USDA's Food and Nutrition Service.

For information on food service, food preparation, meeting the Dietary Guidelines, or available videos and training packages, contact the NFSMI's clearinghouse at 800-321-3054, or write:

National Food Service Management Institute
University of Mississippi
P.O. Drawer 188
University, MS 38677
Website: www.nfsmi.org

FNIC (301) 504-5719

The **Food and Nutrition Information Center (FNIC)** is located at USDA's National Agricultural Library in Beltsville, Maryland. USDA program participants may borrow summer food service reference materials, videos, and training materials free of charge. Sample Nutrition Education and Training materials are available at FNIC. Food labeling material is also available. On-line bibliographies are offered to assist in research., or write:
